Computational Intelligence Techniques in Earth and Environmental Sciences Tanvir Islam, Prashant K. Srivastava, Manika Gupta, Xuan Zhu, Saumitra Mukherjee, 2014-02-14 Computational intelligence techniques have enjoyed growing interest in recent decades among the earth and environmental science research communities for their powerful ability to solve and understand various complex problems and develop novel approaches toward a sustainable earth. This book compiles a collection of recent developments and rigorous applications of computational intelligence in these disciplines. Techniques covered include artificial neural networks, support vector machines, fuzzy logic, decision making algorithms, supervised and unsupervised classification algorithms, probabilistic computing, hybrid methods, and morphic computing. Further topics given treatment in this volume include remote sensing, meteorology, atmospheric and oceanic modeling, climate change, environmental engineering and management, catastrophic natural hazards, air and environmental pollution, and water quality. By linking computational intelligence techniques with earth and environmental science-oriented problems, this book promotes synergistic activities among scientists and technicians working in areas such as data mining and machine learning. We believe that a diverse group of academics, scientists, environmentalists, meteorologists, and computing experts with a common interest in computational intelligence techniques within the earth and environmental sciences will find this book to be of great value.

Per- and Polyfluorinated Alkyl Substances Ravi Naidu, Megh Mallavarapu, Yanju Liu, Anthony Umeh, 2025-03-17 Per- and polyfluorinated alkyl substances (PFAS) have long been utilized in many household products including firefighting foam to manage fires. However, PFAS have been linked to numerous adverse health effects leading to many class actions in the US and other countries. This book, for the first time, discusses the dynamics of PFAS in the terrestrial environment by capturing from the literature the latest information on the composition of PFAS, nomenclature, measurements, including many challenges relating to analytical science, presence of PFAS in the environment, including their nature, fate, and transport, PFAS toxicity, regulatory considerations, and risk and remediation. The book summarizes the many challenges linked to remediation and why a risk-based approach is the best strategy for managing PFAS contamination. Key Features: Overview of PFAS including their presence, nomenclature, use, physicochemical properties, historical use, persistence, transport, and exposure pathways in the environment. In-depth discussion on analytical measurements including analytical challenges. Case study of the nature, the extent of PFAS contamination in the environment. Fate and Transport of PFAS in the environment including why existing studies are limiting and what more needs to be conducted. Toxicity of PFAS including threshold values for safe water, food, etc. Regulatory perspectives including guideline values. Risk Management and remediation. What it means should we move towards zero PFAS future. Conclusion.

Carbon Neutrality, Social Media, Artificial Intelligence, volume II Rita Yi Man Li, Xuefeng Shao, James Crabbe, 2023-10-20 Carbon neutrality refers to net zero carbon emissions It can be achieved by reducing carbon emissions or increasing carbon adsorption The popularity of social media including Twitter YouTube and LinkedIn provides good channels for sharing relevant information and promoting sustainable carbon neutral living styles For example a motor company has launched social media challenges with Korean pop stars to raise awareness of carbon neutrality Social media provides real time information In Jakarta flood related tweet intensity during a flood peaked at about 900 tweets a minute during the floods of 2015 The tweets created real time maps that people sent a minute before Regarding government policies identification of problem areas is needed to help policymakers to resolve problems Machine learning can monitor these events by studying past records to know how countries and governments performed in a high risk event or environmental crisis and this data can be used to provide future recommendations to governments for policy making Additionally AI can analyze online unstructured data and predict various scenarios of carbon emissions and adsorptions using
