

Introduction: This is a very basic lab that helps clarify the concepts of diffusion and osmosis. Diffusion is the tendency for molecules to spread out evenly into the available space. Examples of the diffusion of water across a selectively permeable membrane. Osmosis occurs with the solvent being the electrolyte (usually of water and glycerol base. Other "solvent" molecules (usually those the instructor demonstrates in the biological world and biology as important understanding of diffusion and osmosis.

Objectives: To show the diffusion of water across the membrane through an increase of mass and size.

Materials: The growing test will become dissolved and enlarged approximately twice the original size.

- Materials:**
- 1. Growing test
 - 2. Water cup
 - 3. Glass of glycerol
 - 4. Water
 - 5. Sugar
 - 6. 20 ml of water

- Methods:**
1. Take your growing test and make various measurements including length, height and width. Then your growing test's mass in grams.
 2. Place the growing test in the 2 liter cup and then fill it with approximately 20 ml of water (about 1/2 full). Cover the 2 liter cup with glass wrap so that no water can evaporate.
 3. Move the growing test to a shelf area for 24 hours then you become prepared at water temperature and fill up the approximately 20 liters.
 4. After 24 hours, remove the water and growing test from the 2 liter cup. Repeat step 2 with the growing test.
 5. Measure the change from the initial size of the growing test to its current size.

Results:

	Original Growing Test	Growing Test after 24 hours in water	1 Sugar
Length	11.4 cm	11.4 cm	11.4 cm
Width	1 cm	1.1 cm	1.1 cm
Height	11.4 cm	1.1 cm	1.1 cm
Mass	1.1 gm	1.1 gm	1.1 gm

Formative Assessment in United States Classrooms Cathy Box, 2018-12-12 This book examines the history of formative assessment in the US and explores its potential for changing the landscape of teaching and learning to meet the needs of twenty first century learners The author uses case studies to illuminate the complexity of teaching and the externally imposed and internally constructed contextual elements that affect assessment decision making In this book Box argues effectively for a renewed vision for teacher professional development that centers around the needs of students in a knowledge economy Finally Box offers an overview of systemic changes that are needed in order for progressive teaching and relevant learning to take place

Brain-powered Science Thomas O'Brien, 2010 How can a long metal needle pass through a balloon without popping it How can water flow at very different rates through two identical funnels How can a stick placed on a table under several sheets of newspaper and extended over the edge of a table snap when quickly struck without lifting or tearing the paper Author Thomas O'Brien takes these and 30 more science inquiry activities to a higher level in this book for educators who love to surprise and challenge their students with unanticipated results Using experiments based on the science of a discrepant event an experiment or demonstration in which the outcome is not what students expect O'Brien shows how learners can be motivated to reconsider their preconceived notions and think more closely about what has actually occurred and the underlying scientific explanations What makes this volume more valuable than a mere activity book is the addition of a science education component to the extensive science content found in each activity Each discrepant event is shown to be analogous to a pedagogical principle Speaking directly to teachers O'Brien writes Your participation as teacher as learner experimenter rather than simply passive reader in these minds on activities will lead you to question and help you to revise your implicit assumptions about the nature of science teaching and learning At the same time you will develop expertise with activities that you can use with your own students The dual purpose activities thus allow you to unlock two doors with one key the doors to your own learning and to your students learning The detailed analogies between the activities and science learning make the book an ideal resource for middle and high school teachers science teacher educators and their preservice students and professional development specialists alike This thorough and thought provoking text includes more than 200 up to date internet resources as well as extensions to each of the physical science biology and chemistry activities bringing the total number of inquiry activities to nearly 120 Most important the author reminds teachers that the study of science is full of surprises and should be both meaningful and fun for students

Teaching Secondary Mathematics Douglas K.
