A red circular graphic with a gradient, appearing as a partial circle or a thick arc, located to the right of the text box.

Installation Force Protection Guide:

Reference Manual To Mitigate Potential Terrorist Attacks Against Buildings Department of Homeland Security. Federal Emergency Management Agency, 2003 Reference Manual to Mitigate Potential Terrorist Attacks Against Buildings Michael Chipley, 2003 The text provides guidance to the building science community of architects and engineers to reduce physical damage to buildings related infrastructure and people caused by terrorist assaults It presents incremental approaches that can be implemented over time to decrease the vulnerability of buildings to terrorist threats Many of the recommendations can be implemented quickly and cost effectively The manual contains many how to aspects based upon current information contained in Federal Emergency Management Agency FEMA Department of Commerce Department of Defense Department of Justice General Services Administration Department of Veterans Affairs Centers for Disease Control and Prevention National Institute for Occupational Safety and Health and other publications It describes a threat assessment methodology and presents a Building Vulnerability Assessment Checklist to support the assessment process It also discusses architectural and engineering design considerations standoff distances explosive blast and chemical biological and radiological CBR information The appendices includes a glossary of CBR definitions as well as general definitions of key terminologies used in the building science security area The appendices also describe design considerations for electronic security systems and provide a listing of associations and organizations currently working in the building science security area

Risk Management Series: Risk Assessment - A How-To Guide to Mitigate Potential Terrorist Attacks Against Buildings Federal Emergency Agency, U. S. Department Security, 2013-01-26 The Federal Emergency Management Agency FEMA developed this Risk Assessment A How To Guide to Mitigate Potential Terrorist Attacks Against Buildings to provide a clear flexible and comprehensive methodology to prepare a risk assessment The intended audience includes the building sciences community of architects and engineers working for private institutions building owners operators managers and State and local government officials working in the building sciences community The objective of this How To Guide is to outline methods for identifying the critical assets and functions within buildings determining the threats to those assets and assessing the vulnerabilities associated with those threats Based on those considerations the methods presented in this How To Guide provide a means to assess the risk to the assets and to make risk based decisions on how to mitigate those risks The scope of the methods includes reducing physical damage to structural and non structural components of buildings and related infrastructure and reducing resultant casualties during conventional bomb attacks as well as chemical biological and radiological CBR agents This document is written as a How To Guide It presents five steps and multiple tasks within each step that will lead you through a process for conducting a risk assessment and selecting mitigation options It discusses what information is required to conduct a risk assessment how and where to obtain it and how to use it to calculate a risk score against each selected threat This is one of a series of publications that address security issues in high population private

sector buildings This document is a companion to the Reference Manual to Mitigate Potential Terrorist Attacks Against Buildings FEMA 426 and the Building Design for Homeland Security Training Course FEMA E155 This document also leverages information contained within the Primer for Design of Commercial Buildings to Mitigate Terrorist Attacks FEMA 427 The primary use of this risk assessment methodology is for buildings although it could be adapted for other types of critical infrastructure The foundation of the risk assessment methodology presented in this document is based on the approach that was developed for the Department of Veterans Affairs VA through the National Institute for Building Sciences NIBS Over 150 buildings have been successfully assessed using this technique The risk assessment methodology presented in this publication has been refined by FEMA for this audience The purpose of this How To Guide is to provide a methodology for risk assessment to the building sciences community working for private institutions It is up to the decision makers to decide which types of threats they wish to protect against and which mitigation options are feasible and cost effective This How To Guide views as critical that a team created to assess a particular building will be composed of professionals capable of evaluating different parts of the building They should be senior individuals who have a breadth and depth of experience in the areas of civil electrical and mechanical engineering architecture site planning and security engineering and how security and antiterrorism considerations affect site and building design

Risk Management Series: Site and

Urban Design for Security - Guidance Against Potential Terrorist Attacks Federal Emergency Agency, U. S. Department

Security, 2013-01-27 The Federal Emergency Management Agency FEMA has developed this publication Site and Urban Design for Security Guidance against Potential Terrorist Attacks to provide information and design concepts for the protection of buildings and occupants from site perimeters to the faces of buildings The intended audience includes the design community of architects landscape architects engineers and other consultants working for private institutions building owners and managers and state and local government officials concerned with site planning and design Immediately after September 11 2001 extensive site security measures were put in place particularly in the two target cities of New York and Washington However many of these security measures were applied on an ad hoc basis with little regard for their impacts on development patterns and community character Property owners government entities and others erected security barriers to limit street access and installed a wide variety of security devices on sidewalks buildings and transportation facilities The short term impacts of these measures were certainly justified in the immediate aftermath of the events of September 11 2001 but traffic patterns pedestrian mobility and the vitality of downtown street life were increasingly jeopardized Hence while the main objective of this manual is to reduce physical damage to buildings and related infrastructure through site design the purpose of FEMA 430 is also to ensure that security design provides careful attention to urban design values by maintaining or even enhancing the site amenities and aesthetic quality in urban and semi urban areas This publication focuses on site design aimed to protect buildings from attackers using vehicles carrying explosives These represent the most serious form of attack Large trucks enable terrorists to carry very large amounts of explosives that are capable of causing casualties and destruction over a range of many hundreds of yards Perimeter barriers and protective design within the site can greatly reduce the possibility of vehicle penetration Introduction of smaller explosive devices carried in suitcases or backpacks must be prevented by pedestrian screening methods Site design for security however may impact the function and amenity of the site and barrier and access control design may impact the quality of the public space within the adjacent neighborhood and community The designer's role is to ensure that public amenity and the aesthetics of the site surroundings are kept in balance with security needs This publication contains a number of examples in which the security amenity balance has been maintained through careful design and collaboration between designers and security experts Much security design work since September 11 2001 has been applied to federal and state projects and these provide many of the design examples shown At present federal government projects are subject to mandatory security guidelines that do not apply to private sector projects but these guidelines provide a valuable information resource in the absence of comparable guidelines or regulations applying to private development Operations and management issues and the detailed design of access control intrusion alarm systems electronic perimeter protection and physical security devices such as locking devices are the province of the security consultant and are not covered here except as they may impact the conceptual design of the site Limited information only is provided on some aspects of chemical biological and radiological

CBR attacks that are significant for site designers extensive discussion of approaches to these threats can be found in FEMA 426 **Military Construction Appropriations for 2002: Justification of the budget estimates, Air Force** United States. Congress. House. Committee on Appropriations. Subcommittee on Military Construction Appropriations,2001

Military Construction, Veterans Affairs, and Related Agencies Appropriations United States. Congress. House. Committee on Appropriations. Subcommittee on Military Construction, Veterans Affairs, and Related Agencies,2009

Military Construction, Veterans Affairs, and Related Agencies Appropriations for 2009 United States. Congress. House. Committee on Appropriations. Subcommittee on Military Construction, Veterans Affairs, and Related Agencies,2008

Military Construction Appropriations for 2003: Justification ... Navy and Marine Corps, Reserve components, Defense agencies United States. Congress. House. Committee on Appropriations. Subcommittee on Military Construction Appropriations,2002

Antiterrorism and Threat Response Ross Johnson,2020-09-22 As security professionals we tend to get seduced by the beauty of our technology We go to trade exhibitions filled with the latest innovations and marvel at what we see without understanding how it fits in with what we do It s both overwhelming and distracting like trying to learn to cook by walking through a grocery store This focus on technology teaches us to judge the effectiveness of physical protection systems by the strength of the barriers the acuity of the cameras and the sensitivity of the sensors Terrorists and criminals look for something else entirely though where we see strength they find weakness and vulnerability We are looking at the same things but not seeing the same things If we want to stop them we need to know more than how they work We need to learn to see the way they see A physical protection system that collection of people sensors barriers policies and technology is a lot like a piano and you cannot tell if a piano is in tune by looking at it You have to play it The major contribution of *Antiterrorism and Threat Response Planning and Implementation 2e* is the detailed instruction and practical advice on how to see the weaknesses and vulnerabilities in physical protection systems and upgrade them to meet the challenges of terrorists and criminals Key features of this book are Provides professionals with the background to understand how terrorists think and operate in order to best coordinate their counterterrorism efforts and antiterrorism strategies Examines difficult new problems facing security professionals such as the use of drones guns and the internet as a tool of both recruitment and indoctrination Teaches the reader how to step outside the security department to find and fix weaknesses and vulnerabilities in physical protection systems Introduces and discusses security management and insider threat risk management programs This is the advanced course in protecting physical assets from terrorists and criminals
