It Security Products for Corporate Users Peter Stelzhammer,Andreas Clementi,Thomas Arlt,Philippe Rödlach,2010 Most organizations are aware of the risks threatening their IT environment Viruses trojans worms exploits and many other threats represent a serious danger for the IT department A collapse of the IT system could mean grave financial losses right up to insolvency for a company The IT departments of companies are conscious of this problem Getting the best protection against these threats is the only issue A simple file antivirus solution alone is totally inadequate as there are too many threats from contaminated e mails exploits etc What is required is a comprehensive suite that provides protection against all of these Functional Diversity Because of the immense functional diversity of various antivirus suites and corporate products it is becoming increasingly difficult for decision makers in the IT sector to get a proper overview Which product should one opt for and for which areas of protection During these tests our main focus has not been on malware detection rates but on the products handling and user friendliness and the scope of functionality We have compiled the functional scope of various products in a detailed table For malware detection rates of individual products please refer to the tests of our website <http://www.av-comparatives.org>

CUDA GPU Programming 2010-03-25 *FPGA Design* Philip Simpson,2010-07-23 In August of 2006 an engineering VP from one of Altera s customers approached Misha Burich VP of Engineering at Altera asking for help in reliably being able to predict the cost schedule and quality of system designs reliant on FPGA designs At this time I was responsible for defining the design flow requirements for the Altera design software and was tasked with investigating this further As I worked with

the customer to understand what worked and what did not work reliably in their FPGA design process I noted that this problem was not unique to this one customer The characteristics of the problem are shared by many Corporations that implement designs in FPGAs The Corporation has many design teams at different locations and the success of the FPGA projects vary between the teams There is a wide range of design experience across the teams There is no working process for sharing design blocks between engineering teams As I analyzed the data that I had received from hundreds of customer visits in the past I noticed that design reuse among engineering teams was a challenge I also noticed that many of the design teams at the same Companies and even within the same design team used different design methodologies Altera had recently solved this problem as part of its own FPGA design software and IP development process
