

# BOEING 787 DREAMLINER LANDING GEAR

Safran Landing Systems is responsible for the design, development, qualification testing, manufacture and support of the Boeing 787 main and nose landing gear.

## 787 LANDING GEAR

In addition to supplying the nose and main landing gear, Safran Landing Systems' responsibilities extend to the integration of all landing gear system components, including wheels, tires, brakes, actuators, electric disconnect, etc. Activities also include assembly of the complete pressed landing gears for delivery to the aircraft assembly line for installation on the aircraft.

## TECHNOLOGICAL INNOVATIONS

The 787 landing gear includes a number of technological innovations, specifically in the area of new materials:

- Reducing landing gear weight
- Reducing corrosion and providing higher resistance to fatigue-crack stress parts.

A number of components are made from titanium, including the main gear inner cylinder, which is an industry first.

## 787-9/10

Safran Landing System completed delivery of the first set of 787-9 landing gear in June 2013 to support the recent FAA certification and the planned sale of the 787-9 to 3Q2014. Development activities on the 787-10 variant have also commenced that will result in minor changes to the landing gear to support the modified mission statement of this aircraft.

## PRODUCTION & FINAL INTEGRATION ACTIVITIES

Production activities for the 787 program are shared across Safran Landing Systems facilities in Canada, China, France, Mexico and the UK. Final integration takes place at the company's Guibert facility where the system components supplied are integrated with the landing gear structure prior to delivery to Boeing's final assembly line.

**The Design of Aircraft Landing Gear** Robert Kyle Schmidt, 2021-02-18 The aircraft landing gear and its associated systems represent a compelling design challenge simultaneously a system a structure and a machine it supports the aircraft on the ground absorbs landing and braking energy permits maneuvering and retracts to minimize aircraft drag Yet as it is not required during flight it also represents dead weight and significant effort must be made to minimize its total mass The Design of Aircraft Landing Gear written by R Kyle Schmidt PE B A Sc Mechanical Engineering M Sc Safety and Aircraft Accident Investigation Chairman of the SAE A 5 Committee on Aircraft Landing Gear is designed to guide the reader through the key principles of landing system design and to provide additional references when available Many problems which must be confronted have already been addressed by others in the past but the information is not known or shared leading to the observation that there are few new problems but many new people The Design of Aircraft Landing Gear is intended to share much of the existing information and provide avenues for further exploration The design of an aircraft and its associated systems including the landing system involves iterative loops as the impact of each modification to a system or component is evaluated against the whole It is rare to find that the lightest possible landing gear represents the best solution for the aircraft the lightest landing gear may require attachment structures which don't exist and which would require significant weight and compromise on the part of the airframe structure design With those requirements and compromises in mind The Design of Aircraft Landing Gear starts with the study of airfield compatibility aircraft stability on the ground the correct choice of tires followed by discussion of brakes wheels and brake control systems Various landing gear architectures are investigated together with the details of shock absorber designs Retraction kinematics and mechanisms are studied as well as possible actuation approaches Detailed information on the various hydraulic and electric services commonly found on aircraft and system elements such as dressings lighting and steering are also reviewed Detail design points the process of analysis and a review of the relevant requirements and regulations round out the book content The Design of Aircraft Landing Gear is a landmark work in the industry and a must read for any engineer interested in updating specific skills and students preparing for an exciting career *National Transportation Safety Board Decisions* United States.
