Natinal Senior Grade1math Paper2014:

The Mathematics Education for the Future Project - Proceedings of the 14th International Conference Alan Rogerson, Janina Morska, 2017-07-01 This volume contains the papers presented at the International Conference on Challenges in Mathematics Education for the Next Decade held from September 10 15 2017 in Balatonf red Hungary The Conference was organized by The Mathematics Education for the Future Project an international educational project founded in 1986 Research for Educational Change Jill Adler, Anna Sfard, 2016-06-17 Research for Educational Change presents ways in which educational research can fulfil its commitments to educational practice Focussing its discussion within the context of mathematics education it argues that while research generated insights can have beneficial effects on learning and teaching the question of how these effects are to be generated and sustained is far from evident The question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social injustice In the first part of the book four teams of researchers use different methodologies while analysing the same corpus of data collected in a South African mathematics classroom In the second part each of these teams makes a specific proposal about what can be done and how so that its research generated insights have a tangible beneficial impact on what is happening in mathematical classrooms Combining two discourses that of researchers speaking to one another and that of researchers communicating their insights to those responsible for educational practice the book deals with the perenial question of communication between those who study educational processes and those who are directly responsible for teacher education educational research and classroom practices This book will be key reading for postgraduates researchers and academics in education and particularly in the areas of mathematics education education research teacher education and classroom practice It will also appeal to teacher educators practitioners and undergraduate students interested in educational research **Neutrosophic Sets and Systems, Book Series, Vol. 27, 2019** Florentin Smarandache ,Mohamed Abdel-Basset, Neutrosophic Sets and Systems has been created for publications on advanced studies in neutrosophy neutrosophic set neutrosophic logic neutrosophic probability neutrosophic statistics that started in 1995 and their applications in any field such as the neutrosophic structures developed in algebra geometry topology etc

Algorithmic Regulation Karen Yeung, Martin Lodge, 2019-09-12 As the power and sophistication of big data and predictive analytics has continued to expand so too has policy and public concern about the use of algorithms in contemporary life This is hardly surprising given our increasing reliance on algorithms in daily life touching policy sectors from healthcare transport finance consumer retail manufacturing education and employment through to public service provision and the operation of the criminal justice system This has prompted concerns about the need and importance of holding algorithmic power to account yet it is far from clear that existing legal and other oversight mechanisms are up to the task This collection of essays edited by two leading regulatory governance scholars offers a critical exploration of algorithmic

regulation understood both as a means for co ordinating and regulating social action and decision making as well as the need for institutional mechanisms through which the power of algorithms and algorithmic systems might themselves be regulated It offers a unique perspective that is likely to become a significant reference point for the ever growing debates about the power of algorithms in daily life in the worlds of research policy and practice The range of contributors are drawn from a broad range of disciplinary perspectives including law public administration applied philosophy data science and artificial intelligence Taken together they highlight the rise of algorithmic power the potential benefits and risks associated with this power the way in which Sheila Jasanoff s long standing claim that technology is politics has been thrown into sharp relief by the speed and scale at which algorithmic systems are proliferating and the urgent need for wider public debate and engagement of their underlying values and value trade offs the way in which they affect individual and collective decision making and action and effective and legitimate mechanisms by and through which algorithmic power is held to account
