

## LM555 Timer

### General Description

The LM555 is a highly stable device for generating accurate time delays or oscillation. Additional terminals are provided for triggering or resetting. In the time delay mode of operation, the time is precisely controlled by one external resistor and capacitor. For astable operation as an oscillator, the free running frequency and duty cycle are accurately controlled with two external resistors and one capacitor. The circuit may be triggered and reset on falling waveforms, and the output circuit can source or sink up to 200mA or drive TTL circuits.

### Features

- Direct replacement for 555/556/558
- Timing from microseconds through hours
- Operates in both astable and monostable modes
- Adjustable duty cycle
- Output can source or sink 200 mA
- Output and supply TTL compatible
- Temperature stability better than 0.005% per °C
- Normally-on and normally-off output
- Available in 8-pin MSOP package

### Applications

- Precision timing
- Pulse generation
- Sequenced timing
- Time delay generation
- Pulse width modulation
- Pulse position modulation
- Linear ramp generator

**Practical Pharmaceutical Laboratory Automation** Brian D. Bissett, 2003-05-23 Laboratory automation is an increasingly important part of the job description of many laboratory scientists. Although many laboratory scientists understand the methods and principles involved in automation, most lack the necessary engineering and programming skills needed to successfully automate or interface equipment in the lab. A step by step Electronic Experiences in a Virtual Lab Roberto Gastaldi, Giovanni Campardo, 2020-05-11 This book presents a collection of lessons on various topics commonly encountered in electronic circuit design, including some basic circuits and some complex electronic circuits which it uses as vehicles to explain the basic circuits they are composed of. The circuits considered include a linear amplifier, oscillators, counters, a digital clock, power supplies, a heartbeat detector, a sound equalizer, an audio power amplifier, and a radio. The theoretical analysis has been deliberately kept to a minimum in order to dedicate more time to a learning by doing approach which, after a brief review of the theory, readers are encouraged to use directly with a simulator tool to examine the operation of circuits in a virtual laboratory. Though the book is not a theory textbook, readers should be familiar with the basic principles of electronic design and with spice-like simulation tools. To help with the latter aspect, one chapter is dedicated to the basic functions and commands of the OrCad P spice simulator used for the experiments described in the book.
