Spacecraft Water Exposure Guidelines for Selected Contaminants

National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Toxicology, Committee on Spacecraft Exposure Guidelines, 2007-05-02 The International Space Station is a closed and complex environment so some contamination of its internal atmosphere and water system is expected To protect space crews from contaminants in potable and hygiene water the National Aeronautics and Space Administration NASA requested that the National Research Council NRC provide guidance on how to develop water exposure guidelines and review NASA's development of the exposure guidelines for specific chemicals NASA selects water contaminants for which spacecraft water exposure guidelines SWEGs will be established this involves identifying toxicity effects relevant to astronauts and calculating exposure concentrations on the basis of those end points SWEGs are established for exposures of 1 10 100 and 1 000 days This report is the second volume in the series Spacecraft Water Exposure Guidelines for Selected Chemicals SWEG reports

for acetone alkylamines ammonia barium cadmium caprolactam formate formaldehyde manganese total organic carbon and zinc are included in this report The committee concludes that the SWEGs developed for these chemicals are scientifically valid based on the data reviewed by NASA and are consistent with the NRC 2000 report Methods for Developing Spacecraft Water Exposure Guidelines SWEG reports for additional chemicals will be presented in a subsequent volume

Scientific and Humane Issues in the Use of Random Source Dogs and Cats in Research National Research Council, Division on Earth and Life Studies, Institute for Laboratory Animal Research, Committee on Scientific and Humane Issues in the Use of Random Source Dogs and Cats in Research, 2009-12-30 Scientific and Humane Issues in the Use of Random Source Dogs and Cats in Research examines the value of random source animals in biomedical research and the role of Class B dealers who acquire and resell live dogs and cats to research institutions Findings include that while some random source dogs and cats may be necessary and desirable for National Institutes of Health NIH funded research there is no clear need to obtain those animals from Class B dealers Several options for random source animal acquisition already exist and additional options are recommended which would further ensure the welfare of these animals and foster a positive public image for NIH While the scientific community has recognized and responded to concerns for humane treatment of animals in research government oversight has thus far been unable to fully enforce the Animal Welfare Act in regard to Class B dealers of live animals Although the animals acquired by Class B dealers are destined for research and NIH research in particular the standard of care while in the possession of some Class B dealers requires an inordinate amount of government enforcement and is not commensurate with the policies of most NIH funded research laboratories This dichotomy of standards reflects poorly on public perceptions of NIH and jeopardizes animal welfare This book will be crucial for NIH and other groups using random source animals in research including veterinary schools and research facilities Animal welfare advocates policy makers and concerned pet owners will also find this a vital and informative work for reconciling the needs of research with the welfare of animals

Validation and Regulatory Acceptance of Toxicological Test Methods ,1997 **A Guide for Achieving Flexibility in Highway Design** ,2004

Context sensitive solutions CSS reflect the need to consider highway projects as more than just transportation facilities Depending on how highway projects are integrated into the community they can have far reaching impacts beyond their traffic or transportation function CSS is a comprehensive process that brings stakeholders together in a positive proactive environment to develop projects that not only meet transportation needs but also improve or enhance the community Achieving a flexible context sensitive design solution requires designers to fully understand the reasons behind the processes design values and design procedures that are used This AASHTO Guide shows highway designers how to think flexibly how to recognize the many choices and options they have and how to arrive at the best solution for the particular situation or context It also strives to emphasize that flexible design does not necessarily entail a fundamentally new design process but that it can be integrated into the existing transportation culture This publication represents a major step toward institutionalizing CSS into state transportation departments and other agencies charged with transportation project development
