**Key Concepts in Primary Science** Vivian Cooke, Colin Howard, 2025-02-28 This is essential reading for all primary science trainee and beginning teachers who want to strengthen their science subject knowledge Each chapter tackles a major theme of the new national curriculum and breaks it down into key concepts For each concept there is a detailed audit to help readers identify their current levels of knowledge and understanding along with areas for development This is followed by concise definitions key terminology detailed examples and in practice ideas to clearly relate theory to classroom practice Finally readers are invited to re check their understanding and assess their level of competence at the end of each section The text enables teachers to feel secure in their subject knowledge and confident about effectively conveying that information to their pupils through appropriate subject specific pedagogy

*Evolutionary Thinking Across Disciplines* Agathe du Crest, Martina Valković, André Ariew, Hugh Desmond, Philippe Huneman, Thomas A. C. Reydon, 2023-06-26 This volume aims to clarify the epistemic potential of applying evolutionary thinking outside biology and provides a survey of the current state of the art in research on relevant topics in the life sciences the philosophy of science and the various areas of evolutionary research outside the life sciences By bringing together chapters by evolutionary biologists systematic biologists philosophers of biology philosophers of social science complex systems modelers psychologists anthropologists economists linguists historians and educators the volume examines evolutionary thinking within and outside the life sciences from a multidisciplinary perspective While the chapters written by biologists and philosophers of science address theoretical aspects of the guiding questions and aims of the volume the chapters written by researchers from the other areas approach them from the perspective of applying evolutionary thinking to non biological phenomena Taken together the chapters in this volume do not only show how evolutionary thinking can be fruitfully applied in various areas of investigation but also highlight numerous open problems unanswered questions and issues on which more clarity is needed As such the volume can serve as a starting point for future research on the application of evolutionary thinking across disciplines

**Evolution Evolving** Kevin N. Lala, Tobias Uller, Nathalie Feiner, Marcus Feldman, Scott F. Gilbert, 2024-09-24 A new account of the central role developmental processes play in evolution A new scientific view of evolution is emerging one that challenges and expands our understanding of how evolution works Recent research demonstrates that organisms differ greatly in how effective they are at evolving Whether and how each organism adapts and diversifies depends critically on the mechanistic details of how that organism operates its development physiology and behavior That is because the evolutionary process itself has evolved over time and continues to evolve The scientific understanding of evolution is evolving too with groundbreaking new ways of explaining evolutionary change In this book a group of leading biologists draw on the latest findings in evolutionary genetics and evo devo as well as novel insights from studies of epigenetics symbiosis and inheritance to examine the central role that developmental processes play in evolution Written in an accessible style and illustrated with fascinating examples of natural history the book presents recent scientific discoveries that expand evolutionary biology beyond the classical view of gene transmission guided by natural selection Without undermining the central importance of natural selection and other Darwinian foundations new developmental insights indicate that all organisms possess their own

characteristic sets of evolutionary mechanisms The authors argue that a consideration of developmental phenomena is needed for evolutionary biologists to generate better explanations for adaptation and biodiversity This book provides a new vision of adaptive evolution

**Homology, Genes, and Evolutionary Innovation** Günter P. Wagner, 2014-04-13 A major synthesis of homology written by a top researcher in the field Homology a similar trait shared by different species and derived from common ancestry such as a seal's fin and a bird's wing is one of the most fundamental yet challenging concepts in evolutionary biology This groundbreaking book provides the first mechanistically based theory of what homology is and how it arises in evolution Günter Wagner one of the preeminent researchers in the field argues that homology or character identity can be explained through the historical continuity of character identity networks that is the gene regulatory networks that enable differential gene expression He shows how character identity is independent of the form and function of the character itself because the same network can activate different effector genes and thus control the development of different shapes sizes and qualities of the character Demonstrating how this theoretical model can provide a foundation for understanding the evolutionary origin of novel characters Wagner applies it to the origin and evolution of specific systems such as cell types skin hair and feathers limbs and digits and flowers The first major synthesis of homology to be published in decades Homology Genes and Evolutionary Innovation reveals how a mechanistically based theory can serve as a unifying concept for any branch of science concerned with the structure and development of organisms and how it can help explain major transitions in evolution and broad patterns of biological diversity

Memory Aids for Learning Mason Ross, 2025-02-22 Memory Aids for Learning explores how targeted memory techniques can significantly improve academic outcomes for students with learning disabilities Grounded in cognitive science and educational psychology the book highlights the importance of understanding memory deficits such as those impacting working memory long term memory and executive function common in students with dyslexia or ADHD It emphasizes that memory is a skill that can be developed not a fixed capacity showcasing how mnemonic strategies and visual aids can transform learning The book presents evidence based memory techniques ready for educational settings including spaced repetition and elaborative encoding to enhance retention A key insight is the power of visual imagery in boosting memory It guides readers from foundational knowledge of memory and learning disabilities to practical applications of memory aids detailing their use across various subjects Finally the book champions a strengths based approach focusing on what students can achieve with the right support It provides practical guidelines and lesson plans adaptable for teachers and parents addressing individual learning styles and curriculum demands The content progresses logically beginning with core concepts and culminating in implementation strategies making it a valuable resource for educators parents and students seeking to support learners facing memory related challenges

**Mapping Biology Knowledge** K. Fisher, J.H. Wandersee, D.E. Moody, 2006-04-11 Mapping Biology Knowledge addresses two key topics in the context of biology promoting meaningful learning and knowledge mapping as a strategy for

achieving this goal Meaning making and meaning building are examined from multiple perspectives throughout the book In many biology courses students become so mired in detail that they fail to grasp the big picture Various strategies are proposed for helping instructors focus on the big picture using the need to know principle to decide the level of detail students must have in a given situation The metacognitive tools described here serve as support systems for the mind creating an arena in which learners can operate on ideas They include concept maps cluster maps webs semantic networks and conceptual graphs These tools compared and contrasted in this book are also useful for building and assessing students content and cognitive skills The expanding role of computers in mapping biology knowledge is also explored
