Natural Disasters Abbott 8th Edition:

Natural Disasters Patrick Leon Abbott, 2011-01-31 Natural Disasters 8th edition is marked by major changes in organization and expanded coverage of weather and climate. The discussion of natural disasters is based on 4 main energy flows: 1. Earth's internal energy flow underlies earthquakes and volcanoes; 2. the external energy flow from the Sun fuels weather and climate including tornadoes, hurricanes, floods, wildfires; 3. gravity acts to pull down mass movements of earth and snow; and 4. impacts with asteroids and comets can have major effects on life. The book focuses on the Earth's natural processes and the disasters that occur when the Earth concentrates its energy and releases it, causing death and destruction. Throughout the book, certain themes are maintained: energy sources underlying disasters, plate tectonics and climate change, earth processes operating in rock, water, and atmosphere, significance of geologic time, complexities of multiple variables operating simultaneously, detailed and readable case studies.

Disaster Risk Management Prof. Dr. Vladimir M. Cvetković, 2024-04-22 The textbook is intended for students of basic and master academic studies as well as to a wider professional audience: members of the emergency services etc. who are increasingly faced with the need for a more thorough understanding of the problem of a multidisciplinary approach in the identification process, disaster risk analysis and treatment. The content of the textbook is in line with the curriculum of the subject Disaster Risk Management which is taught in the third year of basic academic studies of the Faculty of Security. In the writing of the textbooks, great attention was paid to meeting high standards in terms of scientific and professional and pedagogical and didactic requirements and extensive scientific and professional material of all relevant foreign and domestic authors was used. Besides the author used a fair treasure trove of his scholarly and professional papers which have been scientifically verified by numerous international and national reviewers. Also, the author incorporated most of his research findings in the country and abroad into the text of the textbook to enrich it with scientifically verified facts. Also, invaluable experience in working with students has helped to release the textbook from the additional scientific reflection that would make it difficult to acquire basic knowledge in the field of disaster risk management. The first edition of the textbook also has its limitations which are reflected in the insufficient theoretical development of the scientific discipline which is relatively young and should contribute to creating additional conditions for the construction of the theory. I would like to emphasize that the textbook represents the first such publication published in the Serbian language in our region which will greatly improve the knowledge and professional competencies of the general professional public.

Natural Disasters: Avalanches-explosions Marlene Bradford, Robert S. Carmichael, Tracy Irons-Georges, 2001 Organized alphabetically by disaster type, this natural disaster reference describes each disaster in scientific terms. Special events follow in chronological order. The set contains photographs, a time line, lists of organizations and agencies, a glossary, and an index.
