Abstract: This paper presents a new approach to the design of a control system for a nonlinear system. The system is first transformed into a linear system by using a nonlinear transformation. The linear system is then controlled by a linear controller. The nonlinear transformation is designed such that the linear system is stable and the nonlinear system is also stable. The proposed method is applied to a nonlinear system and the results are compared with those of a conventional method. The proposed method is shown to be more effective than the conventional method.
