Energy Efficiency Market Report Organization for Economic Cooperation and Development, 2014-10-15 The evidence is clear energy efficiency has played and continues to play a large and valuable role in the sustainable development of the global economy The energy demand that is avoided as a result of steady improvements in the efficiency of energy using stock such as buildings cars and appliances is larger than the total final consumption from coal oil or gas in IEA member countries The market for energy efficiency investments is very large estimated between USD 310 billion and USD 360 billion in 2011 and this market is producing results total final consumption in IEA countries is estimated to be 60% lower today because of energy efficiency improvements over the last four decades Since 2001 investments in energy efficiency in 18 IEA countries have helped to avoid over 1 700 million tonnes of oil equivalent from being consumed This year's report includes an in depth look at energy efficiency developments in the transport sector and in finance Huge new waves of demand for mobility are emerging in OECD non member economies bringing with them the challenges of pollution and congestion already faced in OECD countries Fuel economy standards and other policies are expected to help shape the market for more energy efficient vehicles in the years to come In financial markets energy efficiency is becoming an important segment in its own right aided by a growing range of financial products We document the growing scale and diversity of energy efficiency products and actors Finally this report reviews national energy efficiency market developments in various jurisdictions around the world including Canada China the European Union India and Italy These case studies provide snapshots of specific energy efficiency sub markets and insights into how these markets may evolve in the coming years

Sustainable Energy for All 2015, 2015 Sustainable Energy for All seeks to improve the lives of billions of people across the world and ensure a more sustainable future by working to achieve its three global objectives universal access to energy doubling of the rate of improvement in energy efficiency and doubling of the share of renewable energy in the global energy mix Accountability and transparency are essential for tracking Sustainable Energy for All's global progress Doing so will clarify where the initiative stands how various actions are contributing to the three objectives how much remains to be accomplished and where more action is needed to achieve Sustainable Energy For All This second edition of the SE4ALL Global Tracking Framework provides an update of how the world has been moving towards the three objectives over the period 2010 2012 The report also explores a number of complementary themes First it provides further analysis of the financial cost of meeting the SE4ALL objectives as well as the geographical and technological distribution of the investments that need to be made Second it explores the extent to which countries around the world have access to the technology needed to make progress towards the three goals Third it identifies the improvements in data collection methodologies and capacity building that will be needed to provide a more nuanced and accurate picture of progress over time Finally this new edition of the Global Tracking Framework explores and introduces nexus concepts focusing on the links between energy and four priority areas of

development food water human health and gender Links between most of these areas and energy are well established but often presented in isolation of each other *Green Savings* Marilyn A. Brown, Yu Wang, 2015-09-29 This landmark work lauds the benefits of decreased energy consumption investigating its relationship to public policy and analyzing its potential billion dollar benefits to the U S economy U S consumers tend to use energy indiscriminately something they may no longer be able to do with impunity This game changing book asserts that reducing energy consumption should be a frontline strategy to address global climate change threats to energy security and the challenge of grid reliability The book supports two bold arguments that policies motivating greater investment in high energy efficiency should be a priority and that energy efficiency can help the nation in times of crisis To make their case for the necessity of prioritizing demand reduction the authors examine the policies and markets operating in a number of leading cities states and nations across the globe to uncover the keys to their success These examples show how demand side strategies can significantly reduce pollution cut costs and make the electric grid more resilient The authors explain why these technologies are not widely adopted and assess the potential savings they can produce The book will be an eye opener for policymakers energy professionals and the public as it demonstrates how cost effective demand reduction policies can improve air quality strengthen electricity markets and generate jobs

The Political Economy of Electricity Mark Cooper, 2017-04-24 Providing critical insights that will interest readers ranging from economists to environmentalists policymakers and politicians this book analyzes the economics and technology trends involved in the dilemma of decarbonization and addresses why aggressive policy is required in a capitalist political economy to create a sea change away from fossil fuels The environmental damage across the globe is a result of the success of capitalist industrialism 250 years of carbon pollution resulting from consumption of fossil fuels to drive the economy and the worldwide aspiration to ever increasing levels of economic development But capitalism has also produced the tools to solve the problems it has created in the form of a technological revolution in low carbon renewables distributed resources and intelligent systems to integrate supply and demand This book comprehensively examines the political economy of electricity and analyzes the challenge of transforming today s electricity sector to meet the dual goals of decarbonization and development expressed in the Paris Agreement Author Mark Cooper defines the dilemma of development and decarbonization as the great challenge facing the electricity industry and documents how the economic resources costs of a 100 percent renewable portfolio has declined to the point that decarbonization can pay for itself making the low carbon renewable technologies that enable desired environmental and public health benefits an easy sell He identifies the substantial benefit of increasing use of information communications and advanced control technologies shows how targeted innovation could speed the transition by a decade or two and lower the overall cost of the transition by as much as half and explains why the flexible multi stakeholder approach of the Paris Agreement is the correct approach *Green Finance and Investment Green Investment Banks Scaling up Private Investment in Low-carbon, Climate-resilient Infrastructure*

Handbook of Research on Entrepreneurial Success and its Impact on Regional Development Carvalho, Luísa,2015-11-24 *Low-carbon, Sustainable Future in East Asia* Soocheol Lee,Hector Pollitt,Seung-Joon Park,2015-08-27 East Asia is a key region in the global economy including both the second and third largest global economies already and led by China continuing to expand at a rapid rate This economic growth has led to unprecedented gains in prosperity in the region but it has also led to increasing environmental pressures and energy issues This book assesses ways in which East Asia can continue or even increase existing rates of economic growth while at the same time reducing greenhouse gas emissions and other environmental degradation Using advanced modelling approaches future scenarios for four East Asian countries are assessed in detail including analysis of particular challenges in each country e g coal power in China nuclear

power in Japan Prospects for each country's energy system are assessed in detail and the potential effects of various types of Environmental Tax Reform in the four countries are also considered carefully The final section of the book explores the interaction between trade liberalization a key driver of growth and emission levels in the East Asia region *Climate Change and Natural Disasters* Vinod Thomas, 2017-01-31 The start of the new millennium will be remembered for deadly climate related disasters the great floods in Thailand in 2011 Super Storm Sandy in the United States in 2012 and Typhoon Haiyan in the Philippines in 2013 to name a few In 2014 17.5 million people were displaced by climate related disasters ten times more than the 1.7 million displaced by geophysical hazards What is causing the increase in natural disasters and what effect does it have on the economy *Climate Change and Natural Disasters* sends three messages human made factors exert a growing influence on climate related disasters because of the link to anthropogenic factors there is a pressing need for climate mitigation and prevention including climate adaptation ought not to be viewed as a cost to economic growth but as an investment Ultimately attention to climate related disasters arguably the most tangible manifestation of global warming may help mobilize broader climate action It can also be instrumental in transitioning to a path of low carbon green growth improving disaster resilience improving natural resource use and caring for the urban environment Vinod Thomas proposes that economic growth will become sustainable only if governments political actors and local communities combine natural disaster prevention and controlling climate change into national growth strategies When considering all types of capital particularly human capital climate action can drive economic growth rather than hinder it *Climate Change* Joseph Romm, 2022 This chapter focuses on climate science as it applies to what science can tell us about the changes we have observed to date and what caused them The goal is to answer the key questions that people ask about the science
