Singh, Nayan Sharma, C. Shekhar P. Ojha, 2013-03-09 The Brahmaputra River is a precious gift of Nature to India and especially to its northeast region The meaning of this gift becomes evident immediately when one considers the vastness of water resources which the Brahmaputra River basin possesses Nearly 30% of India's water resources potential and 41% of the country's total hydropower potential are found in this basin In terms of the average discharge the Brahmaputra River is the fifth largest river in the world Traversing a distance of about 2 900 kilometers from Tibet at an elevation of 5 150 meters to the Bay of Bengal and draining an area of nearly 1 6 million square kilometres shared by Tibet India and Bangladesh it has shaped the social economic cultural religious political and linguistic fabric of the northeast region of India from time immemorial Its majestic disposition is nothing short of poetic The northeast region has a colourful ethnic and non ethnic population and

represents almost a miniature India Its biodiversity of flora and fauna and other natural ecosystems is unsurpassable The northeast region of India is endowed with enormous natural resources and the huge potential of the Brahmaputra River basin These resources notwithstanding this part of India remains woefully underdeveloped The current state of low development of the northeast region can arguably be attributed to a multitude of factors

Water Resources Management and Reservoir Operation Ramakar Jha,Vijay P. Singh,Vivekanand Singh,L.B. Roy,Roshni Thendiyath,2021-09-20 This book explores many recent techniques including ANN fuzzy logic hydraulic models and IWRM utilized for integrated water resources management a real challenge in India for obtaining high irrigation efficiency The book deals with topics of current interest such as climate change floods drought and hydrological extremes The impact of climate change on water resources is drawing worldwide attention these days for water resources many countries are already

stressed and climate change along with burgeoning population rising standard of living and increasing demand are adding to the stress Further river basins are becoming less resilient to climatic vagaries Fundamental to addressing these issues is hydrological modelling which is covered in this book Further integrated water resources management is vital to ensure water and food security Integral to the management is groundwater and solute transport The book encompasses tools that will be useful to mitigate the adverse consequences of natural disasters *Entropy and Energy Dissipation in Water Resources* V.P. Singh,M. Fiorentino,2012-12-06 Since the landmark contributions of C E Shannon in 1948 and those of E T Jaynes about a decade later applications of the concept of entropy and the principle of maximum entropy have proliferated in science and engineering Recent years have witnessed a broad range of new and exciting developments in hydrology and water resources using the entropy concept These have encompassed innovative methods for hydrologic network design transfer of information flow forecasting reliability assessment for water distribution systems parameter estimation derivation of probability distributions drainage network analysis sediment yield modeling and pollutant loading bridge scour analysis construction of velocity profiles comparative evaluation of hydrologic models and so on Some of these methods hold great promise for advancement of engineering practice permitting rational alternatives to conventional approaches On the other hand the concepts of energy and energy dissipation are being increasingly applied to a wide spectrum of problems in environmental and water resources Both entropy and energy dissipation have their origin in thermodynamics and are related concepts Yet many of the developments using entropy seem to be based entirely on statistical interpretation and have seemingly little physical content For example most of the entropy related developments and applications in water resources have been based on the information theoretic interpretation of entropy We believe if the power of the entropy concept is to be fully realized then its physical basis has to be established **Sustainable Water Resources Management** Rajib Kumar Bhattacharjya,Bipul Talukdar,Konstantinos L. Katsifarakis,2022-06-17 This book brings high quality selected research articles from the international conference on Sustainable Water Resources Management SWARM 2020 held at Assam Engineering College Guwahati Assam India during 19 21 June 2020 The book focuses on water management and planning urban water management climate change and global warming management of groundwater and aquifer remediation water conservation water quality pollution control management of trans boundary rivers advanced hydrological modelling and hydro disaster risk management of sustainable water management
