Locally Presentable and Accessible Categories Jiri Adamek (ing), Jiří Rosický, 1994-03-10 First the concepts of lambda presentable objects locally lambda presentable categories and lambda accessible categories are discussed in detail The authors go on to prove that Freyd's essentially algebraic categories are precisely the locally presentable categories In the final chapter they treat some advanced topics in model theory For researchers in category theory algebra computer science and model theory this book will be a necessary purchase

Representations and Techniques for 3D Object Recognition and Scene Interpretation Derek Hoiem, Silvio Savarese, 2022-05-31 One of the grand challenges of artificial intelligence is to enable computers to interpret 3D scenes and objects from imagery This book organizes and introduces major concepts in 3D scene and object representation and inference from still images with a focus on recent efforts to fuse models of geometry and perspective with statistical machine learning The book is organized into three sections 1 Interpretation of Physical Space 2 Recognition of 3D Objects and 3 Integrated 3D Scene Interpretation The first discusses representations of spatial layout and techniques to interpret physical scenes from images The second section introduces representations for 3D object categories that account for the intrinsically 3D nature of objects and provide robustness to change in viewpoints The third section discusses strategies to unite inference of scene geometry and object pose and identity into a coherent scene interpretation Each section broadly surveys important ideas from cognitive science and artificial intelligence research organizes and discusses key concepts and techniques from recent work in computer vision and describes a few sample approaches in detail Newcomers to computer vision will benefit from introductions to basic concepts such as single view geometry and image classification while experts and novices alike may find inspiration from the book's organization and discussion of the most recent ideas in 3D scene understanding and 3D object recognition Specific topics include mathematics of perspective geometry visual elements of the physical scene structural 3D scene representations techniques and features for image and region categorization historical perspective computational models and datasets and machine learning techniques for 3D object recognition inferences of geometrical attributes of objects such as size and pose and probabilistic and feature passing approaches for contextual reasoning about 3D objects and scenes Table of Contents Background on 3D Scene Models Single view Geometry Modeling the Physical Scene Categorizing Images and Regions Examples of 3D Scene Interpretation Background on 3D Recognition Modeling 3D Objects Recognizing and Understanding 3D Objects Examples of 2D 1 2 Layout Models Reasoning about Objects and Scenes Cascades of Classifiers Conclusion and Future Directions

equations *Sensor Fusion and its Applications* Ciza Thomas,2010-08-16 This book aims to explore the latest practices and research works in the area of sensor fusion The book intends to provide a collection of novel ideas theories and solutions related to the research areas in the field of sensor fusion This book is a unique comprehensive and up to date resource for sensor fusion systems designers This book is appropriate for use as an upper division undergraduate or graduate level text book It should also be of interest to researchers who need to process and interpret the sensor data in most scientific and engineering fields The initial chapters in this book provide a general overview of sensor fusion The later chapters focus mostly on the applications of sensor fusion Much of this work has been published in refereed journals and conference proceedings and these papers have been modified and edited for content and style With contributions from the world s leading fusion researchers and academicians this book has 22 chapters covering the fundamental theory and cutting edge developments that are driving this field *Discrete and Continuous Nonlinear Schrödinger Systems* M. J. Ablowitz,B. Prinari,A. D. Trubatch,2004 In recent years there have been important and far reaching developments in the study of nonlinear waves and a class of nonlinear wave equations which arise frequently in applications The wide interest in this field comes from the understanding of special waves called solitons and the associated development of a method of solution to a class of nonlinear wave equations termed the inverse scattering transform IST Before these developments very little was known about the solutions to such soliton equations The IST technique applies to both continuous and discrete nonlinear Schrödinger equations of scalar and vector type Also included is the IST for the Toda lattice and nonlinear ladder network which are well known discrete systems This book first published in 2003 presents the detailed mathematical analysis of the scattering theory soliton solutions are obtained and soliton interactions both scalar and vector are analyzed Much of the material is not available in the previously published literature *Spaces of Kleinian Groups* Yair N. Minsky,Makoto Sakuma,Caroline Series,2006-06-19 The subject of Kleinian groups and hyperbolic 3 manifolds is currently undergoing explosively fast development the last few years having seen the resolution of many longstanding conjectures This volume contains important expositions and original work by some of the main contributors on topics such as topology and geometry of 3 manifolds curve complexes classical Ahlfors Bers theory computer explorations and projective structures Researchers in these and related areas will find much of interest here *Pattern Recognition and Artificial Intelligence* Christian Wallraven,Cheng-Lin Liu,Arun Ross,2025-02-07 This volume constitutes the refereed proceedings of the 4th International Conference on Pattern Recognition and Artificial Intelligence ICPRAI 2024 held in Jeju Island South Korea during July 03 06 2024 The 69 full papers presented together with 08 short papers were carefully reviewed and selected from a total of 135 submissions The conference focuses on topics that includes advanced deep learning approaches for image and document processing generative AI novel analysis methods for medical data and biometrics *Semilocal Categories and Modules with Semilocal Endomorphism Rings* Alberto Facchini,2019-10-23 This book collects and coherently presents the research that has

been undertaken since the author's previous book *Module Theory* 1998. In addition to some of the key results since 1995 it also discusses the development of much of the supporting material. In the twenty years following the publication of the Camps Dicks theorem the work of Facchini, Herbera, Shamsuddin, Puninski, Prihoda and others has established the study of serial modules and modules with semilocal endomorphism rings as one of the promising directions for module theoretic research. Providing readers with insights into the directions in which the research in this field is moving as well as a better understanding of how it interacts with other research areas, the book appeals to undergraduates and graduate students as well as researchers interested in algebra.

Advances in Linear Logic Jean-Yves Girard, Yves Lafont, Laurent Regnier, 1995-06-22. Linear logic introduced in 1986 by J. Y. Girard is based upon a fine grain analysis of the main proof theoretical notions of logic. The subject develops along the lines of denotational semantics, proof nets and the geometry of interaction. Its basic dynamical nature has attracted computer scientists and various promising connections have been made in the areas of optimal program execution, interaction nets and knowledge representation. This book is the refereed proceedings of the first international meeting on linear logic held at Cornell University in June 1993. Survey papers devoted to specific areas of linear logic as well as an extensive general introduction to the subject by J. Y. Girard have been added so as to make this book a valuable tool both for the beginner and for the advanced researcher.

Surveys in Combinatorics, 2001 James William Peter Hirschfeld, 2001. The British Combinatorial Conference is held every two years and is now a key event for mathematicians worldwide working in combinatorics. This volume is published on the occasion of the 18th meeting which was held 1st-6th July 2001 at the University of Sussex. The papers contained here are surveys contributed by the invited speakers and are thus of a quality befitting the event. There is also a tribute to Crispin Nash-Williams, past chairman of the British Combinatorial Committee. The diversity of the subjects covered means that this will be a valuable reference for researchers in combinatorics. However, graduate students will also find much here that could be of use for stimulating future research.

Nonlinear Elasticity Y. B. Fu, R. W. Ogden, 2001-05-07 Nonlinear elasticity is concerned with nonlinear effects associated with deformations of elastic bodies subjected to external forces or temperature variations It has important applications in many areas including the aerospace and rubber industries and biomechanics This book written by a group of leading researchers invited especially for the purpose provides an up to date and concise account of the fundamentals of the theory of nonlinear elasticity and a comprehensive review of several major current research directions in this important field It combines the characteristics of coherence and detail found in standard treatises with the strength and freshness of research articles The emphasis is placed firmly on coverage of modern topics and recent developments rather than on the very theoretical approach often found The book will be an excellent reference source for both beginners and specialists in engineering applied mathematics and physics It is also ideally suited for graduate courses
