frustrating patterns of miscommunication and conflict Yeager explains how to adopt what he terms the mentor mindset which is a leadership style that is attuned to young people's need for status and respect Anyone can adopt the mentor mindset by following a few highly effective and easy to learn practices such as validating young people's perspectives rather than dismissing them asking them questions rather than telling them what to do being transparent about your beliefs and goals rather than assuming that they will accurately guess your thoughts and holding them to high standards rather than coddling them Yeager's scientific experiments have shown these practices reduce a wide variety of behavior problems including school dropout unhealthy eating stress purposelessness mental health problems and more One of the biggest misconceptions about mentoring is that it takes up too much time On the contrary those who use the mentor mindset end up with more time Through back and forth conversations young people feel empowered and managers can transfer responsibility to them Young people in this age group are poised to learn grow and accomplish incredible things if only we can tap into the basic neurobiological systems that drive their motivation and behavior An essential read for anyone who interacts with young people 10 to 25 is a groundbreaking book that offers long term strategies to help nurture well adjusted independent accomplished young people who contribute to society in positive ways all while making our own lives easier Hierarchical Linear Modeling G. Duke, Marsha Carr, William Sterrett, 2012-12-27 Developing and updating school

improvement plans is an annual ritual for virtually all school principals and their school improvement committees. Still, large numbers of schools continue to produce disappointing outcomes. The authors believe that part of the problem is the result of plans that focus on the wrong targets and that rely on ineffective strategies for improvement. To help principals and their school improvement committees develop and implement plans with a greater likelihood of success, the authors offer a step-by-step process for school improvement planning. They go on to pinpoint specific school improvement goals, including raising reading and mathematics achievement, building robust school cultures, addressing the needs of English language learners, improving instruction, and reducing absenteeism and dropouts. For each goal, a variety of objectives and proven strategies is presented along with sample school improvement plans. The book addresses the differences in planning to turn around a low-performing school, planning to sustain improvements over time, and planning to move a good school to a great school.

[A Guide to Detracking Math Courses](#) Angela Torres, Ho Nguyen, Elizabeth Hull Barnes, Laura Wentworth, 2023-05-03. Create a pathway to equity by detracking mathematics. The tracked mathematics system has been operating in US schools for decades. However, research demonstrates negative effects on subgroups of students by keeping them in a single math track, thereby denying them access to rigorous coursework needed for college and career readiness. The journey to change this involves confronting some long-standing beliefs and structures in education. When supported with the right structures, instructional shifts, coalition building, and educator training and support, the detracking of mathematics courses can be a primary pathway to equity. The ultimate goal is to increase more students' access to and achievement in higher levels of mathematics learning, especially for students who are historically marginalized. Based on the stories and lessons learned from the San Francisco Unified School District educators who have talked the talk and walked the walk, this book provides a model for all those involved in taking on detracking efforts, from policymakers and school administrators to math coaches and teachers. By sharing stories of real-world examples, lessons learned, and prompts to provoke discussion about your own context, the book walks you through designing and gaining support for a policy of detracked math courses, implementing the policy through practical shifts in scheduling, curriculum, professional development, and coaching, supporting and improving the policy through continuous research, monitoring, and maintenance. This book offers the big ideas that help you in your own unique journey to advance equity in your school or district's mathematics education and also provides practical information to help students in a detracked system thrive.
