Comparative Risk Assessment and Environmental

Decision Making Igor Linkov, Abou Bakr Ramadan, 2006-03-02 Decision making in environmental projects is typically a complex and confusing process characterized by trade offs between socio political environmental and economic impacts Comparative Risk Assessment CRA is a methodology applied to facilitate decision making when various activities compete for limited resources CRA has become an increasingly accepted research tool and has helped to characterize environmental profiles and priorities on the regional and national level CRA may be considered as part of the more general but as yet quite academic field of multi criteria decision analysis MCDA Considerable research in the area of MCDA has made available methods for applying scientific decision theoretical approaches to multi criteria problems but its applications especially in environmental areas are still limited The papers show that the use of comparative risk assessment can provide the scientific basis for environmentally sound and cost efficient policies strategies and solutions to our environmental challenges

Cafeo, 2010-03-11 7 1 1 Background Uncertainty can be considered as the lack of adequate information to make a decision It is important to quantify uncertainties in mathematical models used for design and optimization of nondeterministic engineering systems In general certainty can be broadly classified into three types Bae et al 2004 Ha Rok 2004 Klir and Wierman 1998 Oberkamp and Helton 2002 Sentz 2002 The first one is aleatory uncertainty also referred to as stochastic uncertainty or inherent certainty it results from the fact that a system can behave in random ways For example the failure of

an engine can be modeled as an aleatory uncertainty because the failure can occur at a random time One cannot predict exactly when the engine will fail even if a large quantity of failure data is gathered available The second one is epistemic uncertainty also known as subjective uncertainty or reducible certainty it is the uncertainty of the outcome of some random event due to lack of knowledge or information in any phase or activity of the modeling process By gaining information about the system or environmental factors one can reduce the epistemic uncertainty For example a lack of experimental data to characterize new materials and processes leads to epistemic uncertainty

Conceptual Modeling - ER 2010 Jeffrey Parsons, Motoshi Saeki, Peretz Shoval, Carson Woo, Yair Wand, 2010-10-27 This publication comprises the proceedings of the 29 International Conference on Conceptual Modeling ER 2010 which was held this year in Vancouver British Columbia Canada Conceptual modeling can be considered as lying at the confluence of the three main aspects of information technology applications the world of the stakeholders and users the world of the developers and the technologies available to them Conceptual models provide abstractions of various aspects related to the development of systems such as the application domain user needs database design and software specifications These models are used to analyze and define user needs and system requirements to support communications between stakeholders and developers to provide the basis for systems design and to document the requirements for and the design rationale of

developed systems Because of their role at the junction of usage development and technology conceptual models can be very important to the successful development and deployment of IT applications Therefore the research and development of methods techniques tools and languages that can be used in the process of creating maintaining and using conceptual models is of great practical and theoretical importance Such work is conducted in academia research institutions and industry Conceptual modeling is now applied in virtually all areas of IT applications and spans varied domains such as organizational information systems systems that include specialized data for spatial temporal and multimedia applications and biomedical applications

Management of Information Systems Maria Pomffyova,2018-10-24 Management functions were developed first as a systematic step to carry out management activities while implementation of the information components followed as part of management elements The authors point out that the use of the possibilities and advantages of quantitatively supported managerial decisions gives managers the ability to quantify the impacts of both technical hard and subjective soft constraints and improve managerial decision making processes that would otherwise be based mostly on personal intuition and experience To achieve the goals and benefits of excellent performance it is necessary to design and develop integrated models that would coordinate management functions and information system components as an integrated process These facts are presented in various case studies

Food safety risk management: Evidence-informed policies and decisions, considering multiple factors Food and Agriculture Organization of the United Nations, 2018-06-15 These FAO guidance materials were developed to support food safety risk managers and policy makers in applying structured evidence informed processes to decision making Food safety issues can have widespread impacts beyond public health They may contribute to or detract from the achievement of goals in areas including nutrition food security food trade and market access economic and rural development The risk analysis paradigm guides risk managers to ensure their decisions are based on an assessment of risks to health and consideration of other factors in choosing the preferred risk management decision The materials assist decision makers in applying a multi factor approach and is applied to two key decision areas setting food safety priorities and selecting risk management options The principles and approaches can be applied to all food safety decisions Case studies are included as examples of how to apply this decision making process Using this guidance will lead to improved food safety decisions where decision makers can demonstrate how evidence was used and any trade offs made It also facilitates stakeholder engagement transparency and accountability throughout the decision making process *Resource Efficiency in Manufacturing Value Chains* Stefan Alexander Blume, 2020-11-04 This book presents a concept for fostering resource efficient manufacturing The protection of our environment demands a more responsible use of natural resources and a higher degree of transparency

along manufacturing value chains will be required in order to make significant advances in this context. Industrial decision makers must be provided with adequate methods and tools to simultaneously and systematically pursue technical, economic and environmental targets. Building on established and complementary methods such as material and energy flow analysis, MEFA, value stream mapping, VSM, life cycle costing, LCC and environmental life cycle assessment, LCA, this book introduces a concept that allows a holistic modeling and multi-dimensional performance assessment of manufacturing systems on different levels from processes up to entire value chains and product life cycles. It also demonstrates the application of the concept using two case studies from the metal mechanic industry.
