1. GENERAL DESCRIPTION.

a. GENERAL.

(1) The Hydraulic type Constant Speed Control is a self-contained governor which automatically brings about the adjustments in propeller blade pitch necessary to maintain constant engine speed under varying flight conditions. The majority of these units are designed for mounting on a pad on the nose of the engine.

(2) A governor consists of: a gear pump which takes oil from the engine lubricating system and

boosts it to pressure to that required to operate the propeller pitch changing mechanism; a pilot valve actuated by spring balanced fly-weights which controls the flow of oil to and from the propeller; a pressure-operated transfer valve which on feathering installations allows high pressure oil from an auxiliary pump to shunt out the governor when the propeller is being feathered and unfeathered; and a relief valve system which limits the output pressure of the gear pump, yet allows it to provide sufficient operating force to control the propeller under all conditions.
