

→ HUKY

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.001	0.000	1.23	0.221
Gender of the head of household (Male = 1, Female = 0)	-0.050	0.025	-1.96	0.049
Constant	1.500	0.100	15.00	0.000

The regression results indicate that the age of the head of household has a positive but statistically insignificant effect on the number of children in the household. The gender of the head of household has a negative and statistically significant effect, suggesting that households headed by females tend to have fewer children than those headed by males.

A black and white photograph showing a patient lying on a cot in a hospital room. A nurse is standing next to the cot, attending to the patient. The room has a window with blinds and some medical equipment visible in the background.
