

Living (reproductive)

Female _____
Genotype (what they inherit)

1. When using living individuals, and when using non-reproductive (e.g. the study of skeletons?) living individuals are **superior** to fossils. This is because the "fossils" all "passed up" because of the early death with poor plasticity. The fossil pass just a message. The plastic reproductive skeleton, and a message is transmitted by offspring for a short period of time.

2. What is the Law of Segregation?

Segregation = separation of alleles during gamete formation

Source genetic information: the alleles for each gene segregate from each other so that each gamete carries only one allele for each gene.

3. What is Law of Independent Assortment? and of Mendel's principle that states that genes for different traits are segregated independently during the formation of gametes.

Look up the square for another the cross-related below. The trait being studied is round seeds (dominant) and wrinkled seeds (recessive).

4. Rr x rr
