, *Effectiveness of teachers' guides in the Global South* Benjamin Piper,Yasmin Sitabkhan,Jessica Mejia,Kellie Betts,2018-05-10 This report presents the results of RTI International Education's study on teachers guides across 13 countries and 19 projects Using quantitative and qualitative methods we examine how teachers guides across the projects differ and find substantial variation in the design and structure of the documents We develop a scripting index so that the scripting levels of the guides can be compared across projects The impact results of the programs that use teachers guides show significant impacts on learning outcomes associated with approximately an additional half year of learning showing that structured teachers guides contribute to improved learning outcomes During observations we find that teachers make a variety of changes in their classroom instruction from how the guides are written showing that the utilization of structured teachers guides do not create robotic teachers unable to use their own professional skills to teach children Unfortunately many changes that teachers make reduce the amount of group work and interactivity that was described in the guides suggesting that programs should encourage teachers to more heavily utilize the instructional routines designed in the guide The report includes a set of research based guidelines that material developers can use to develop teachers guides that will support effective instructional practices and help improve learning outcomes The key takeaway from the report is that structured teachers guides improve learning outcomes but that overly scripted teachers guides are somewhat less effective than simplified teachers guides that give specific guidance to the teacher but are not written word for word for each lesson in the guide

*Perspectives on Interrogative Models of Inquiry* Can Başkent,2015-10-07 This book explores the two major elements of Hintikka's model of inquiry underlying game theoretical motivations and the central role of questioning The chapters build on the Hintikkan tradition extending Hintikka's model and present a wide variety of approaches to the philosophy of inquiry from different directions ranging from erotetic logic to Lakatosian philosophy from socio epistemologic approaches to strategic reasoning and mathematical practice Hintikka's theory of inquiry is a well known example of a dynamic epistemic procedure In an interrogative inquiry the inquirer is given a theory and a question He then tries to answer the question based on the theory by posing questions to nature or an oracle The initial formulation of this procedure by Hintikka is rather broad and informal This volume introduces a carefully selected responses to the issues discussed by Hintikka The articles in the volume were contributed by various authors associated with a research project on Hintikka's interrogative theory of inquiry conducted in the Institut d Histoire et de Philosophie des Sciences et des Techniques IHPST of Paris including those who visited to share their insight

*Intelligent Design using Solar-Climatic Vision* Samimi, Mojtaba, Nasrollahi, Farshad, 2014-07-22 Thanks to the availability of energy materials and technologies the level of comfort in buildings is increasing around the world However today we are also facing buildings and cities that are responsible for a high percentage of global energy consumption Pollution heat island effect climate change and global warming are just a few of the challenges that the human race as well as other living matter on earth will have to deal with in future Moreover as time goes by we may not necessarily live in healthier conditions with better life styles Within a limited period this global and complex situation will need thorough integrated and local surgery This book is designed to draw greater attention to the sun and how a solar climatic vision can influence and improve architectural design and urban planning It may not have been discovered yet how small our planet is and how big the effect of a simple decision can be but it is nevertheless important to be reminded of the sun not only as a powerful and perpetual actor in our dynamic atmosphere but also as a basis for figuring out a variety of adaptive solutions that must be identified

and followed In addition to the changes made by architects clients and builders as well as planners municipalities and all other persons who make decisions on plans the role of those who live inside buildings and cities not as users but as producers and maintainers also bear a certain degree of responsibility Therefore the optimization of new constructions the modification of existing buildings and urban fabric should be considered on a global scale in regard to the sun as well as our future needs The aim should be to improve energy efficiency health comfort and safety in all living spaces whether indoors or outdoors In this respect the analysis of the current situation forecasting future scenarios and the development of intelligent alternatives are fundamental steps In terms of energy efficiency daylight provision and internal comfort the use of advanced building materials and technologies as well as simulation tools can improve the building envelope and its performance However it is important to understand when where and how they should best be applied to achieve an intelligent form as well as a responsive layout with a high level of performance for other essential aspects too e g structure view operation Although today many consider solar architecture the attaching of solar thermal collectors and PVs to building roofs and facades this is only one of the complex tasks which should be integrated in the design In fact solar architecture incorporates all the complexities of architecture on different scales Besides it has to respond accurately to certain issues resulting from the currently low price of other energy sources in many locations In addition to the reduction of payments other valuable improvements associated with solar climatic considerations in the design should be clarified and compared During the design process an optimization i e re arrangement re orientation re sizing of different elements namely solar surfaces i e transparent opaque surfaces shading reflecting devices collectors building volumes and trees does not necessarily increase the construction costs but can help identify deficient or over designed elements Alongside improving the energy efficiency aspects of individual buildings a solar climatic vision in planning can lead to other qualities for the benefit of small and large scale living spaces whether indoors or outdoors Around the world we must be prepared for more shocking news and annual records if many continue to build buildings whether cheap or expensive with little attention to the sun In neighborhoods on an urban scale the insufficient analysis and inaccurate decisions regarding building volumes and orientation can affect the potentials and performance of both internal and external spaces in terms of energy production energy demand daylight health comfort and safety for long periods of time This book includes a decade of SOLARCHVISION practices on how architectural design and urban planning can be adapted by the constant path and variable effects of the sun in each location Sharing such a vision can help architects urban planners and clients to make more accurate decisions concerning energy and climate related matters After presenting fundamental diagrams in different cities around the world e g the sun paths solar radiation and temperature models the role of an intelligent design for the building skin is described and analyzed in terms of finding a good relation between outside and inside as well as the direct and indirect collection of solar energy on different building surfaces This research can bring about new appearances and structures for the creation of smart buildings and

responsive cities Aufgrund der Verfügbarkeit von Energie Materialien und Technologien erhält sich der Wohnkomfort in Gebieten weltweit Jedoch stehen wir auch vor dem Problem dass Gebäude und Straßen einen hohen Anteil des weltweiten Energieverbrauchs verantwortlich sind Umweltverschmutzung Wärmeinseleffekte Klimawandel und globale Erwärmung sind nur einige der vielen Herausforderungen mit denen die menschliche Rasse ebenso sowie alles weitere Leben auf der Erde in Zukunft umgehen muss In absehbarer Zeit wird diese komplexe globale Situation gründliche ganzheitliche und praktische Eingriffe erfordern Dieses Buch richtet die Aufmerksamkeit auf die Sonne und dadurch auch darauf wie ein solarklimatisches Konzept die Architektur und Stadtplanung beeinflussen und verbessern kann Es ist vielleicht noch nicht entdeckt worden wie klein unser Planet doch eigentlich ist und wie groß der Einfluss einer einfachen Entscheidung sein kann aber vor allem ist es wichtig dass die Sonne eine wichtige und immer wiederholende Rolle in unserer dynamischen Atmosphäre spielt und dies als Grundlage bei der Suche von Lösungen erkannt und angewandt wird Neben Architekten Kunden und Bauherren sowie Planern Kommunen und allen anderen Personen die Entscheidungen bei der Planung treffen spielen die in den Gebäuden und Straßen Lebenden auch eine Rolle nicht als Nutzer sondern als Erzeuger und Betreuer und auch sie haben eine gewisse Verantwortung Daher sollten alle Optimierungen neuer Bauten Modifikationen von Bestandsgebäuden und Stadtstrukturen auf globaler Ebene Bezug auf die Sonne und auf zukünftige Bedürfnisse nehmen Das Ziel sollte es sein die Energieeffizienz Gesundheit Komfort und Sicherheit in allen Lebensräumen ob drinnen oder draußen zu verbessern In dieser Hinsicht sind die Analyse der aktuellen Situation die Prognose zukünftiger Szenarien und die Entwicklung intelligenter Alternativen grundlegende Schritte Der Einsatz von modernen Baustoffen und Technologien sowie Simulationswerkzeugen kann die Energieeffizienz und Leistungsfähigkeit eines Gebäudes verbessern Es ist jedoch wichtig zu verstehen wann wo und wie sie am besten in der architektonischen Gestaltung angewendet werden können um ein ansprechendes Layout mit einer hohen Leistung für eine Vielzahl von architektonischen Aspekten zu erreichen und in Bezug auf Energieeffizienz Tageslichtversorgung und internen Komfort ein optimales Ergebnis zu erzielen Obwohl heute viele schon das Anbringen von Solar Kollektoren und PV Modulen auf Gebäuden und Fassaden als Solararchitektur betrachten ist dies nur eine der komplexen Aufgaben in diesem Feld der Architektur Tatsächlich beinhaltet die Solararchitektur die gesamte Komplexität der Architektur auf unterschiedlichen Ebenen Außerdem hat sie sehr genau auf bestimmte Sachverhalte zu reagieren welche aus den vielerorts aktuell geringen Energiekosten anderer Energiequellen resultieren Neben der Reduzierung von Baukosten sollten andere wertvolle Verbesserungen resultierend aus solar klimatischen Berlegungen im Entwurf hervorgehoben und verglichen werden In der Tat kann eine Optimierung verschiedener Elemente während des Design Prozesses wie z.B. Solarflächen Baukörpern und Bäumen nicht notwendigerweise die Baukosten steigern jedoch dabei helfen um Kosten zu senken oder berdimensionierte Elemente zu identifizieren Neben der Verbesserung der Energieeffizienzaspekte einzelner Gebäude kann eine zuverlässige integrierte solarklimatische Planung zu weiteren Qualitäten der Lebensräume für Menschen auf der Welt m
