Aero/space Engineering ,1958 Fast Fusion of Basic Belief Assignments Defined on a Dichotomous Frame of Discernment Jean Dezert,Florentin Smarandache,Albena Tchamova,Deqiang Han, In this paper we propose a new fusion

approach to combine basic belief assignments BBAs defined on a dichotomous frame of discernment based on their canonical decomposition In a companion paper we have already proved that the canonical decomposition of this type of BBA called dichotomous BBA is always possible and unique thanks to the proportional conflict redistribution rule No 5 PCR5 More precisely any dichotomous BBA is always the PCR5 combination of two simpler basic belief assignments named respectively the pro evidence and the contra evidence From this interesting canonical decomposition we present a new way of combining many dichotomous BBAs and we show that the computational time for fusing these dichotomous BBAs based on their canonical decomposition is quasi linear with the number of sources to combine contrary to the direct fusion of the dichotomous BBAs altogether
