South African national bibliography, 1999 Classified list with author and title index *Timebomb* Giles

Merritt, 2025-05-27 Ageing is a timebomb We celebrate our greater longevity yet few of us consider its consequences This book is an important warning that unless Europeans defuse its explosive force within two decades our societies will be devastated by it The hard fact is that because our political economies have been built around shorter lifespans they risk being blown apart by ageing The pressures exerted by the over 60s who are increasing from today's quarter of the population to a third will upend our politics and impoverish our young Millennials and Gen Zers are already saddled with their elders runaway pension and healthcare costs but are themselves poorer and less privileged Merritt a veteran analyst of the European scene traces the demographic projections that politicians of all persuasions have long ignored and shines a harsh light on policy shortcomings that must be urgently addressed For anyone wants a stake in our future this book is essential reading which clarifies the political choices to be made if comparatively prosperous Europe isn't to die of old age

International Handbook of Mathematical Learning Difficulties Annemarie Fritz, Vitor Geraldi Haase, Pekka Räsänen, 2019-01-30 This comprehensive volume provides teachers researchers and education professionals with cutting edge knowledge developed in the last decades by the educational behavioural and neurosciences integrating cognitive developmental and socioeconomic approaches to deal with the problems children face in learning mathematics The neurocognitive mechanisms and the cognitive processes underlying acquisition of arithmetic abilities and their significance for education have been the subject of intense research in the last few decades but the most part of this research has been conducted in non applied settings and there's still a deep discrepancy between the level of scientific knowledge and its implementation into actual educational settings Now it's time to bring the results from the laboratory to the classroom Apart from bringing the theoretical discussions to educational settings the volume presents a wide range of methods for early detection of children with risks in mathematics learning and strategies to develop effective interventions based on innovative cognitive test instruments It also provides insights to translate research knowledge into public policies in order to address socioeconomic issues And it does so from an international perspective dedicating a whole section to the cultural diversity of mathematics learning difficulties in different parts of the world All of this makes the International Handbook of Mathematical Learning Difficulties an essential tool for those involved in the daily struggle to prepare the future generations to succeed in the global knowledge society

Choosing Homes, Choosing Schools Annette Lareau, Kimberly Goyette, 2014-03-31 A series of policy shifts over the past decade promises to change how Americans decide where to send their children to school In theory the boom in standardized test scores and charter schools will allow parents to evaluate their assigned neighborhood school or move in search of a better option But what kind of data do parents actually use while choosing schools Are there differences among suburban and urban families How do parents' choices influence school and residential

segregation in America Choosing Homes Choosing Schools presents a breakthrough analysis of the new era of school choice and what it portends for American neighborhoods The distinguished contributors to Choosing Homes Choosing Schools investigate the complex relationship between education neighborhood social networks and larger patterns of inequality Paul Jargowsky reviews recent trends in segregation by race and class His analysis shows that segregation between blacks and whites has declined since 1970 but remains extremely high Moreover white families with children are less likely than childless whites to live in neighborhoods with more minority residents In her chapter Annette Lareau draws on interviews with parents in three suburban neighborhoods to analyze school choice decisions Surprisingly she finds that middle and upper class parents do not rely on active research such as school tours or test scores Instead most simply trust advice from friends and other people in their network Their decision making process was largely informal and passive Eliot Weinginer complements this research when he draws from his data on urban parents He finds that these families worry endlessly about the selection of a school and that parents of all backgrounds actively consider alternatives including charter schools Middle and upper class parents relied more on federally mandated report cards district websites and online forums while working class parents use network contacts to gain information on school quality Little previous research has explored what role school concerns play in the preferences of white and minority parents for particular neighborhoods Featuring innovative work from more than a dozen scholars Choosing Homes Choosing Schools adroitly addresses this gap and provides a firmer understanding of how Americans choose where to live and send their children to school

Indigenous Studies and Engaged Anthropology Paul Sillitoe, 2016-05-23 Advancing the rising field of engaged or participatory anthropology that is emerging at the same time as increased opposition from Indigenous peoples to research this book offers critical reflections on research approaches to date The engaged approach seeks to change the researcher researched relationship fundamentally to make methods more appropriate and beneficial to communities by involving them as

participants in the entire process from choice of research topic onwards The aim is not only to change power relationships but also engage with non academic audiences The advancement of such an egalitarian and inclusive approach to research can provoke strong opposition Some argue that it threatens academic rigour and worry about the undermining of disciplinary authority Others point to the difficulties of establishing an appropriately non ethnocentric moral stance and navigating the complex problems communities face Drawing on the experiences of Indigenous scholars anthropologists and development professionals acquainted with a range of cultures this book furthers our understanding of pressing issues such as interpretation transmission and ownership of Indigenous knowledge and appropriate ways to represent and communicate it All the contributors recognise the plurality of knowledge and incorporate perspectives that derive at least in part from other ways of being in the world
