Mathematics for the Life Sciences Erin N. Bodine, Suzanne Lenhart, Louis J. Gross, 2014-08-17 An accessible undergraduate textbook on the essential math concepts used in the life sciences The life sciences deal with a vast array of problems at different spatial temporal and organizational scales The mathematics necessary to describe model and analyze these problems is similarly diverse incorporating quantitative techniques that are rarely taught in standard undergraduate courses This textbook provides an accessible introduction to these critical mathematical concepts linking them to biological observation and theory while also presenting the computational tools needed to address problems not readily investigated using mathematics alone Proven in the classroom and requiring only a background in high school math Mathematics for the Life Sciences doesn't just focus on calculus as do most other textbooks on the subject It covers deterministic methods and those that incorporate uncertainty problems in discrete and continuous time probability graphing and data analysis matrix modeling difference equations differential equations and much more The book uses MATLAB throughout explaining how to use it write code and connect models to data in examples chosen from across the life sciences Provides undergraduate life science students with a succinct overview of major mathematical concepts that are essential for modern biology Covers all the major quantitative concepts that national reports have identified as the ideal components of an entry level course for life science students Provides good background for the MCAT which now includes data based and statistical reasoning Explicitly links data and math modeling Includes end of chapter homework problems end of unit student projects and select answers to homework problems Uses MATLAB throughout and MATLAB m files with an R supplement are available online Prepares students to read with comprehension the growing quantitative literature across the life sciences A solutions manual for professors and an illustration package is available

Matrix Algorithms in MATLAB Ong U. Routh, 2016-04-22 Matrix Algorithms in MATLAB focuses on the MATLAB code implementations of matrix algorithms The MATLAB codes presented in the book are tested with thousands of runs of MATLAB randomly generated matrices and the notation in the book follows the MATLAB style to ensure a smooth transition from formulation to the code with MATLAB codes discussed in this book kept to within 100 lines for the sake of clarity The book provides an overview and classification of the interrelations of various algorithms as well as numerous examples to demonstrate code usage and the properties of the presented algorithms Despite the wide availability of computer programs for matrix computations it continues to be an active area of research and development New applications new algorithms and improvements to old algorithms are constantly emerging Presents the first book available on matrix algorithms implemented in real computer code Provides algorithms covered in three parts the mathematical development of the algorithm using a simple example the code implementation and then numerical examples using the code Allows readers to gain a quick understanding of an algorithm by debugging or reading the source code Includes downloadable codes on an accompanying companion website www.matrixalgorithmsinmatlab.com that can be used
