Empirical Data English Edition:

Algorithmic Learning in a Random World Vladimir Vovk, Alexander Gammernan, Glenn Shafer, 2022-12-13 This book is about conformal prediction an approach to prediction that originated in machine learning in the late 1990s The main feature of conformal prediction is the principled treatment of the reliability of predictions The prediction algorithms described conformal predictors are provably valid in the sense that they evaluate the reliability of their own predictions in a way that is neither over pessimistic nor over optimistic the latter being especially dangerous The approach is still flexible enough to incorporate most of the existing powerful methods of machine learning The book covers both key conformal predictors and the mathematical analysis of their properties Algorithmic Learning in a Random World contains in addition to proofs of validity results about the efficiency of conformal predictors The only assumption required for validity is that of randomness the prediction algorithm is presented with independent and identically distributed examples in later chapters even the assumption of randomness is significantly relaxed Interesting results about efficiency are established both under randomness and under stronger assumptions Since publication of the First Edition in 2005 conformal prediction has found numerous applications in medicine and industry and is becoming a popular machine learning technique This Second Edition contains three new chapters One is about conformal predictive distributions which are more informative than the set predictions produced by standard conformal predictors Another is about the efficiency of ways of testing the assumption of randomness based on conformal prediction The third new chapter harnesses conformal testing procedures for protecting machine learning algorithms against changes in the distribution of the data In addition the existing chapters have been revised updated and expanded

The Nature of Statistical Learning Theory Vladimir Vapnik, 2013-06-29 The aim of this book is to discuss the fundamental ideas which lie behind the statistical theory of learning and generalization It considers learning as a general problem of

function estimation based on empirical data. Omitting proofs and technical details, the author concentrates on discussing the main results of learning theory and their connections to fundamental problems in statistics. These include the setting of learning problems based on the model of minimizing the risk functional from empirical data; a comprehensive analysis of the empirical risk minimization principle including necessary and sufficient conditions for its consistency; non asymptotic bounds for the risk achieved using the empirical risk minimization principle; principles for controlling the generalization ability of learning machines using small sample sizes based on these bounds; the Support Vector methods that control the generalization ability when estimating function using small sample size. The second edition of the book contains three new chapters devoted to further development of the learning theory and SVM techniques. These include the theory of direct method of learning based on solving multidimensional integral equations for density conditional probability and conditional density estimation; a new inductive principle of learning. Written in a readable and concise style, the book is intended for statisticians, mathematicians, physicists, and computer scientists. Vladimir N Vapnik is Technology Leader AT T Labs Research and Professor of London University. He is one of the founders of **Concise Routledge Encyclopedia of Philosophy** (Routledge (Firm), 2000). The scholarship of this monumental and award winning ten volume work is available in one affordable book that brings together more than 2 000 entries from the original in a shortened more accessible format. Extensively cross referenced and indexed.

China's Generation Gap Jiaming Sun, Dongmei Cheng, 2018-01-12. Based on data collected for the Generation Gap Survey in Shanghai and updated to take into account contemporary trends, this book uses an empirical approach to study the generation gap in China. It covers various aspects of life from professional and family life to political participation and belief systems, analysing and comparing the values held by four different generations. Encompassing more than 2000 case studies and drawing on a wealth of fieldwork interviews, in particular it examines the experiences, thoughts and perceptions of adolescents, young adults, the middle aged and the elderly. As the largest sociological survey ever conducted regarding attitudes and value changes by different age groups in Shanghai, it highlights how social change and globalization have impacted on new generations and the results indicate the dramatic difference and supersession of social ideologies between the generations. A unique piece of research shedding light on a changing Chinese society, China's Generation Gap will be of huge value to students and scholars of Chinese culture and society, Chinese social policy, globalisation and cultural studies.
