Secretary of the State,1983 **The Journal of Symbolic Logic** Alonzo Church,Cooper Harold Langford,1967 Includes lists of members **Logic Based Program Synthesis and Transformation** Alberto Pettorossi,2002-07-17 This book presents recent advances in the field of nanoscale characterization of ferroelectric materials using scanning probe microscopy SPM It addresses various imaging mechanisms of ferroelectric domains in SPM quantitative analysis of the piezoresponse signals as well as basic physics of ferroelectrics at the nanoscale level such as nanoscale switching scaling effects and transport behavior This state of the art review of theory and experiments on nanoscale polarization phenomena will be a useful reference for advanced readers as well for newcomers and graduate students interested in the SPM techniques The non specialists will obtain valuable information about different approaches to electrical characterization by SPM while researchers in the ferroelectric field will be provided with details of SPM based measurements of ferroelectrics **Instantiation Theory** James G. Williams,1991-08-07 Instantiation Theory presents a new general unification algorithm that is of immediate use in building theorem provers and logic programming systems Instantiation theory is the study of instantiation in an abstract context that is applicable to most commonly studied logical formalisms The volume begins with a survey of general approaches to the study of instantiation as found in tree systems order sorted algebras algebraic theories composita and instantiation systems A classification of instantiation systems is given based on properties of substitutions degree of type strictness and well foundedness of terms Equational theories and the use of typed variables are studied in terms of quotient homomorphisms and embeddings respectively Every instantiation system is a quotient system of a subsystem of first order term instantiation The general unification algorithm is developed as an application of the basic theory Its soundness is rigorously proved and its completeness and efficiency are verified for certain classes of instantiation systems Appropriate applications of the algorithm include unification of first order terms order sorted terms and first order formulas modulo alpha conversion as well as equational unification using simple congruences *Computer Hardware Description Languages and Their Applications* Cees-Jan Koomen,Tōru Motooka,1985 Hardbound The papers of this seventh conference reflect the gradual shift from the original emphasis on the uses of language design to describe hardware toward more formal techniques for specification and verification This volume highlights the following topics Languages to specify and describe hardware design to reason about timing and functional behaviour and to support modelling and performance evaluation Synthesis and verification of systems as means of support

for the design process and as a guarantee of design consistency and functional correctness Tool Integration aspects such as the representation of design information and the putting together of tools within a coherent design environment
