It then looks at the state of climate change today and the causes. Following that the book focuses on how we waste and save energy. The remaining chapters look at the many alternative sources of energy generation like photovoltaics solar thermal systems and power plants wind power systems hydropower plants and geothermal power. The book also delves into current state of biomass energy and the hydrogen and fuel cell industry. It finishes with a look at the future of the subject shining a light on some positive examples of sustainable energy. Clear overview on each state of the art technology in alternative energy production. Presents correlations between use of energy and energy prices and climate change.
