Foundations of Musical Grammar Lawrence Michael Zbikowski, 2017 How is it that humans are able to organize seemingly random sounds into the captivating sonic structures we call music In this volume Lawrence M Zbikowski argues that humans unique ability to correlate sounds with dynamic processes provides the basis for the construction of meaningful musical utterances that is a foundation for musical grammar Building on a framework for grammar developed by cognitive linguists over the past three decades and the pathbreaking research set out in his earlier book *Conceptualizing Music* OUP 2002 Zbikowski explains how the ability to draw analogies between widely differing domains allowing humans to connect sequences of musical sounds with emotion processes physical gestures and the steps of dance He shows how these connections underpin an evocative movement from a cantata by J S Bach guide our understanding of gestural choreographies by Fred Astaire and Charlie Chaplin and frame connections between movement and music in French courtly dance and the Viennese waltz Through thorough surveys of research in cognitive science and careful analyses of works by composers ranging from Bach Brahms and Schubert to Jerome Kern Zbikowski explores the unique resources for communication offered by music and examines how these differ from those of language *Foundations of Musical Grammar* is sure to be an instant and enticingly controversial classic within the evolving literature addressing the many complex intersections of music and language from dust jacket **The Magic of Truth** Farah Dally, 2014-11-10 Questions of truth have occupied philosophers scientists and theologians throughout human history What is truth Does it exist How do we define truth Who determines what is true and what is not *The Magic of Truth* defends the relativity of truth by examining its role in literature the arts and science as well as in our own lives and traditions The product of intensive research on the idea of truth and the secret meaning it holds Farah Dally argues that no field of study can progress without calling into question the traditional view of truth as a clear objective image *Surfaces and Essences* Douglas R Hofstadter, Emmanuel Sander, 2013-04-23 Analogy is the core of all thinking This is the simple but unorthodox premise that Pulitzer Prize winning author Douglas Hofstadter and French psychologist Emmanuel Sander defend in their new work Hofstadter has been grappling with the mysteries of human thought for over thirty years Now with his trademark wit and special talent for making complex ideas vivid he has partnered with Sander to put forth a highly novel perspective on cognition We are constantly faced with a swirling and intermingling

multitude of ill defined situations Our brain s job is to try to make sense of this unpredictable swarming chaos of stimuli How does it do so The ceaseless hail of input triggers analogies galore helping us to pinpoint the essence of what is going on Often this means the spontaneous evocation of words sometimes idioms sometimes the triggering of nameless long buried memories Why did two year old Camille proudly exclaim I undressed the banana Why do people who hear a story often blurt out Exactly the same thing happened to me when it was a completely different event How do we recognize an aggressive driver from a split second glance in our rearview mirror What in a friend s remark triggers the offhand reply That s just sour grapes What did Albert Einstein see that made him suspect that light consists of particles when a century of research had driven the final nail in the coffin of that long dead idea The answer to all these questions of course is analogy making the meat and potatoes the heart and soul the fuel and fire the gist and the crux the lifeblood and the wellsprings of thought Analogy making far from happening at rare intervals occurs at all moments defining thinking from top to toe from the tiniest and most fleeting thoughts to the most creative scientific insights Like G Escher Bach before it Surfaces and Essences will profoundly enrich our understanding of our own minds By plunging the reader into an extraordinary variety of colorful situations involving language thought and memory by revealing bit by bit the constantly churning cognitive mechanisms normally completely hidden from view and by discovering in them one central invariant core the incessant unconscious quest for strong analogical links to past experiences this book puts forth a radical and deeply surprising new vision of the act of thinking
