supports teachers and administrators working together to raise student achievement by using proven instructional design and best practices Robotics Technology and Its Varied Uses United States. Congress. House. Committee on Science, Space, and Technology. Subcommittee on Science, Research, and Technology,1989 **US educational achievement on international assessments** Ben Dalton,2011-05-23 The debate about the performance of US students on international assessments of educational achievement routinely fails to account for one consistently stark result US achievement is bifurcated between a group of high performing Asian and white students and an exceptionally low performing group of black and Hispanic students By summarizing results across 20 major international tests conducted since 1995 this research paper shows that when US racial and ethnic groups are separately compared with other countries Asian and white students regularly perform at or near the top of international rankings while black and Hispanic students typically rank at or near the bottom Furthermore the United States has a substantially larger minority population than all other developed countries and minority status is not synonymous with internationally comparable factors such as socioeconomic level or immigrant status The fact that overall US scores are disproportionately influenced by race and ethnicity suggests that researchers and reformers must reconsider how they use and interpret the results of international achievement tests The research paper recommends providing and analyzing cross national data separately by ethnic groups to inform approaches to improving education for all students
