Steele, Tracy L. Hull, Thomas E. Read, Theodore J. Saclarides, Anthony J. Senagore, Charles B. Whitlow, 2016-03-24 This third edition text provides a completely revised and updated new version of this unique modern practical text that covers the strategic evaluation specific approaches and detailed management techniques utilized by expert colorectal surgeons caring for patients with complex problems whether they result from underlying colorectal disease or from complications arising from previous surgical therapy The format follows that of both a how to manual as well as an algorithm based guide to allow the reader to understand the thought process behind the proposed treatment strategy By making use of evidence based recommendations each chapter includes not only background information and diagnostic therapeutic guidelines but also

provides a narrative by the author on his/her operative technical details and perioperative tips and tricks that they utilize in the management of these complex surgical challenges. Distinctive to this book is the reliance on experts in the field including past presidents of the ASCRS as well as multiple other national and internationally recognized surgeons to lend their personal insight into situations where data may be more sparse but individual and collective experience is paramount to making sound decisions and thereby optimizing patient outcomes. The text includes chapters on the assessment of risk and methods utilized to minimize perioperative complications. In addition, it incorporates sections covering the medical and surgical therapies for abdominal, pelvic, and anorectal disease. Moreover, the technical challenges of managing complications resulting from the original or subsequent operations are addressed. The underlying focus throughout the text is on providing pragmatic and understandable solutions that can be readily implemented by surgeons of varying experience to successfully treat complex colorectal problems. However, it also goes beyond the technical aspects of colorectal surgery and includes special sections highlighting the essence of a surgeon covering aspects involving the medical, legal, ethical, and economic challenges confronting surgeons. Throughout the text, each author provides an ongoing narrative of his/her individual surgical techniques along with illustrations and diagrams to personally take the reader through the crucial steps of the procedure and key points of patient care inherent to that topic. Additionally, where appropriate, links to online videos give the reader an up-front look into technical aspects of colorectal surgery.

Index Medicus, 2002 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings Paperbound Books in Print, 1991 Advances in Virtual Agents and Affective Computing for the Understanding and Remediation of Social Cognitive Disorders Eric Brunet-Gouet, Ali Oker, Jean-Claude Martin, Ouriel Grynszpan, Philip L. Jackson, 2016-03-02

Advances in modern sciences occur thanks to within fields discoveries as well as confrontation of concepts and methods from separated sometimes distant domains of knowledge. For instance, the fields of psychology and psychopathology benefited from accumulated contributions from cognitive neurosciences which in turn received insights from molecular chemistry, cellular biology, physics, neuroimaging, statistics, and computer sciences data processing etc. From the results of these researches, one can argue that among the numerous cognitive phenomena supposedly involved in the emergence of human intelligence and organized behavior, some of them are specific to the social nature of our phylogenetic order. Scientific reductionism allowed to divide the social cognitive system into several components, i.e., emotion processing and regulation, mental state inference, theory of mind, agency etc. New paradigms were progressively designed to investigate these processes within highly controlled laboratory settings. Moreover, the related constructs were successful at better understanding psychopathological conditions such as autism and schizophrenia with partial relationships with illness outcomes. Here we would like to outline the parallel development of concepts in social neurosciences and in other domains such as computer science, affective computing, virtual reality development, and even hardware technologies. While several researchers in neurosciences pointed

out the necessity to consider naturalistic social cognition Zaki and Ochsner *Ann N Y Acad Sci* 1167 16 30 2009 the second person perspective Schilbach et al *Behav Brain Sci* 36 4 393 414 2013 and reciprocity de Bruin et al *Front Hum Neurosci* 6 151 2012 both computer and software developments allowed more and more realistic real time models of our environment and of virtual humans capable of some interaction with users As noted at the very beginning of this editorial a new convergence between scientific disciplines might occur from which it is tricky to predict the outcomes in terms of new concepts methods and uses Although this convergence is motivated by the intuition that it fits well ongoing societal changes increasing social demands on computer technologies augmenting funding it comes with several difficulties for which the current *Frontiers in topic* strives to bring some positive answers and to provide both theoretical arguments and experimental examples The first issue is about concepts and vocabulary as the contributions described in the following are authored by neuroscientists computer scientists psychopathologists etc A special attention was given during the reviewing process to stay as close as possible to the publication standards in psychological and health sciences and to avoid purely technical descriptions The second problem concerns methods more complex computerized interaction models results in unpredictable and poorly controlled experiments In other words the assets of naturalistic paradigms may be alleviated by the difficulty to match results between subjects populations conditions Of course this practical question is extremely important for investigating pathologies that are associated with profoundly divergent behavioral patterns Some of the contributions of this topic provide description of strategies that allowed to solve these difficulties at least partially The last issue is about heterogeneity of the objectives of the researches presented here While selection criteria focused on the use of innovative technologies to assess or improve social cognition the fields of application of this approach were quite unexpected In an attempt to organize the contributions three directions of research can be identified 1 how innovation in methods might improve understanding and assessment of social cognition disorders or pathology 2 within the framework of cognitive behavioral psychotherapies CBT how should we consider the use of virtual reality or augmented reality 3 which are the benefits of these techniques for investigating severe mental disorders schizophrenia or autism and performing cognitive training The first challenging question is insightfully raised in the contribution of Timmermans and Schilbach 2014 giving orientations for investigating alterations of social interaction in psychiatric disorders by the use of dual interactive eye tracking with virtual anthropomorphic avatars Joyal Jacob and collaborators 2014 bring concurrent and construct validities of a newly developed set of virtual faces expressing six fundamental emotions The relevance of virtual reality was exemplified with two contributions focusing on anxiety related phenomena Jackson et al 2015 describe a new environment allowing to investigate empathy for dynamic FACS coded facial expressions including pain Based on a systematic investigation of the impact of social stimuli modalities visual auditory Ruch and collaborators are able to characterize the specificity of the interpretation of laughter in people with gelotophobia 2014 On the issue of social anxiety Aymerich Franch et al 2014

presented two studies in which public speaking anxiety has been correlated with avatars similarity of participants self representations The second issue focuses on how advances in virtual reality may benefit to cognitive and behavioral therapies in psychiatry These interventions share a common framework that articulates thoughts feelings or emotions and behaviors and proposes gradual modification of each of these levels thanks to thought and schema analysis stress reduction procedures etc They were observed to be somehow useful for the treatment of depression stress disorders phobias and are gaining some authority in personality disorders and addictions The main asset of new technologies is the possibility to control the characteristics of symptom eliciting stimuli situations and more precisely the degree to which immersion is enforced For example Baus and Bouchard 2014 provide a review on the extension of virtual reality exposure based therapy toward recently described augmented reality exposure based therapy in individuals with phobias Concerning substance dependence disorders Hone Blanchet et collaborators 2014 present another review on how virtual reality can be an asset for both therapy and craving assessment stressing out the possibilities to simulate social interactions associated with drug seeking behaviors and even peers pressure to consume The last issue this Frontiers topic deals with encompasses the questions raised by social cognitive training or remediation in severe and chronic mental disorders autistic disorders schizophrenia Here therapies are based on drill and practice or strategy shaping procedures and most of the time share an errorless learning of repeated cognitive challenges Computerized methods were early proposed for that they do effortlessly and with limited costs repetitive stimulations While repetition was incompatible with realism in the social cognitive domain recent advances provide both immersion and full control over stimuli Georgescu and al 2014 exhaustively reviews the use of virtual characters to assess and train non verbal communication in high functioning autism HFA Grynszpan and Nadel 2015 present an original eye tracking method to reveal the link between gaze patterns and pragmatic abilities again in HFA About schizophrenia Oker and collaborators 2015 discuss and report some insights on how an affective and reactive virtual agents might be useful to assess and remediate several defects of social cognitive disorders About assessment within virtual avatars on schizophrenia Park et al 2014 focused on effect of perceived intimacy on social decision making with schizophrenia patients Regarding schizophrenia remediation Peyroux and Franck 2014 presented a new method named RC2S which is a cognitive remediation program to improve social cognition in schizophrenia and related disorders To conclude briefly while it is largely acknowledged that social interaction can be studied as a topic of its own all the contributions demonstrate the added value of expressive virtual agents and affective computing techniques for the experimentation It also appears that the use of virtual reality is at the very beginning of a new scientific endeavor in cognitive sciences and medicine CQ ,1983 *Amateur Radio* ,1983 Cumulated Index Medicus ,1968 **Difficult Diagnosis** Hyman Jacob Roberts,1958
