Making Sense of Exponents

Randy Palisoc,2014-10-28 An exponent is a simple idea that

captures the powerful concept of repeated multiplication Exponents find their way into many real life situations Two

examples include figuring out the number of teams to invite to a six round single elimination basketball tournament 64

figuring out the amount that 100 000 will grow to by earning 8% interest per year compounded annually for 10 years 215 892

50 With repeated multiplication numbers can become very big very quickly In other words they grow exponentially

Additionally when students are fluent working with exponents it has an exponential effect on learning It helps them crack the

code to higher level math concepts such as factoring quadratic expressions and using scientific notation Making Sense of

Exponents builds fluency by helping students notice the nuances involved with working with exponents
