Progress in Computational Physics Volume 3: Novel Trends in Lattice-Boltzmann Methods Matthias Ehrhardt, 2013-06-18 Progress in Computational Physics is an e book series devoted to recent research trends in computational physics It contains chapters contributed by outstanding experts of modeling of physical problems The series focuses on interdisciplinary computational perspectives of current physical challenges new numerical techniques for the solution of mathematical wave equations and describes certain real world applications With the help of powerful computers and sophisticated methods of numerical mathematics it is possible to simulate many ultramodern devices e g photonic crystals structures semiconductor nanostructures or fuel cell stacks devices thus preventing expensive and longstanding

design and optimization in the laboratories In this book series research manuscripts are shortened as single chapters and focus on one hot topic per volume Engineers physicists meteorologists etc and applied mathematicians can benefit from the series content Readers will get a deep and active insight into state of the art modeling and simulation techniques of ultra modern devices and problems The third volume Novel Trends in Lattice Boltzmann Methods Reactive Flow Physicochemical Transport and Fluid Structure Interaction contains 10 chapters devoted to mathematical analysis of different issues related to the lattice Boltzmann methods advanced numerical techniques for physico chemical flows fluid structure interaction and practical applications of these phenomena to real world problems

Recent Progress in Surface Science J. F. Danielli, K. G. A. Pankhurst, A. C. Riddiford, 2013-10-22 Recent Progress in Surface Science Volume 1 reviews significant advances made in surface science during the period 1956-1961 as well as problems that are still unsolved Topics covered range from surface viscosity and electrode processes to corrosion of metals surface active substances and foams and free liquid films The electrical double layer and electrokinetic phenomena are also examined along with facilitated diffusion and the chemistry of the semiconductor surface Comprised of 11 chapters this volume first deals with surface viscosity and general principles and applications of surface rheology as well as the viscosity of various types of monolayers The reader is then introduced to foams and free liquid films with emphasis on the theory of foaming the electrical double layer and electrokinetic phenomena and electrode processes Subsequent chapters explore the corrosion of metals surface active substances surface chemistry of compound and organic semiconductors and the mechanism of facilitated diffusion The book also considers the morphology and dynamic aspects of cell contacts before concluding with an analysis of the formation and properties of bimolecular lipid membranes This book will be of interest to chemists and physicists
