Question 1

[Maximum mark: 6]

In a particular city 20 % of the inhabitants have been immunized against a certain disease. The probability of infection from the disease among those immunized is $\frac{1}{10}$, and among those not immunized the probability is $\frac{3}{4}$. If a person is chosen at random and found to be infected, find the probability that this person has been immunized.

Question 2

[Maximum mark: 6]

A target consists of three concentric circles of radii 1 m, 3 m and 5 m respectively, as shown in the diagram.

diagram not to scale

Nina shoots an arrow at the target. She has a probability of $\frac{1}{2}$ of hitting the target. If the arrow hits the target it does so at a random point on the target. Ten points are scored for hitting region A, six points for hitting region B, and three points for hitting region C. Find the expected number of points Nina scores each time she shoots an arrow at the target.

Statistics, 1997 **Empirical Processes with Applications to Statistics** Galen R. Shorack, Jon A. Wellner, 2009-09-24

Originally published in 1986 this valuable reference provides a detailed treatment of limit theorems and inequalities for empirical processes of real valued random variables It also includes applications of the theory to censored data spacings rank statistics quantiles and many functionals of empirical processes including a treatment of bootstrap methods and a summary of inequalities that are useful for proving limit theorems At the end of the Errata section the authors have supplied references to solutions for 11 of the 19 Open Questions provided in the book's original edition Statistical Literacy at School Jane M. Watson, 2013-05-13 This book reveals the development of students' understanding of statistical literacy It provides a way to see student thinking and gives readers a deeper sense of how students think about important statistical topics Intended as a complement to curriculum documents and textbook series it is consistent with the current principles and standards of the National Council of Teachers of Mathematics The term statistical literacy is used to emphasize that the purpose of the school curriculum should not be to turn out statisticians but to prepare statistically literate school graduates who are prepared to participate in social decision making Based on ten years of research with reference to other significant research as appropriate the book looks at students thinking in relation to tasks based on sampling graphical representations averages chance beginning inference and variation which are essential to later work in formal statistics For those students who do not proceed to formal study as well as those who do these concepts provide a basis for decision making or questioning when presented with claims based on data in societal settings Statistical Literacy at School Growth and Goals establishes an overall framework for statistical literacy in terms of both the links to specific school curricula and the wider appreciation of contexts within which chance and data handling ideas are applied demonstrates within this framework that there are many connections among specific ideas and constructs provides tasks adaptable for classroom or assessment use that are appropriate for the goals of statistical literacy presents extensive examples of student performance on the tasks illustrating hierarchies of achievement to assist in monitoring gains and meeting the goals of statistical literacy and includes a summary of analysis of survey data that suggests a developmental hierarchy for students over the years of schooling with respect to the goal of statistical literacy Statistical Literacy at School Growth and Goals is directed to researchers curriculum developers professionals and students in mathematics education as well those across the curriculum who are interested in students' cognitive development within the field to teachers who want to focus on the concepts involved in statistical literacy

without the use of formal statistical techniques and to statisticians who are interested in the development of student understanding before students are exposed to the formal study of statistics

Handbook of Newsvendor Problems Tsan-Ming Choi, 2012-06-09 As a fundamental problem in stochastic inventory control the newsvendor problem has been studied since the 18th century in the economic literature and has been widely used to analyze supply chains in fashion and seasonal product industries Since the 1950s the newsvendor problem has been extensively studied in operations research and extended to model a variety of real life problems The simplest and most elementary version of the newsvendor problem is an optimal stocking problem in which a newsvendor needs to decide how many newspapers to order for future demand where the future demand is uncertain and follows a stationary distribution Research in this area has greatly increased over the last few years and now the Handbook of Newsvendor Problems Models Extensions and Applications captures the state of the art The handbook consists of two sections Models and Extensions and Applications Each section includes many interesting works in the respective domain Section I presents papers on topics like the multi product newsvendor problems the newsvendor problem with law invariant coherent measures of risk a Copula approach to inventory pooling problems with newsvendor products repeated newsvendor games with transshipments cooperative newsvendor games an economic interpretation for the price setting newsvendor problem newsvendor models with alternative risk preferences within expected utility theory and prospect theory frameworks and newsvendor problems with VaR and CVaR consideration Section II presents papers on such topics as a two period newsvendor problem for closed loop supply chain analysis the remanufacturing newsvendor problem inventory centralization in a newsvendor setting when shortage costs differ production planning on an unreliable machine for multiple items analysis of the newsvendor problem under carbon emissions policies optimal decisions of the manufacturer and distributor in a fresh product supply chain involving long distance transportation a newsvendor perspective on profit target setting for multiple divisions and a portfolio approach to multi product newsvendor problem with budget constraint This well balanced handbook presents a wealth of theoretical results from different perspectives With contributions from many of the leading researchers in the field the Handbook of Newsvendor Problems Models Extensions and Applications is a timely addition to the literature and consolidates all the new and exciting works related to the newsvendor problem into one high quality source
