Search and Rescue Robotics Multiple Authors,2017-08-23 In the event of large crises earthquakes typhoons floods a primordial task of the fire and rescue services is the search for human survivors on the incident site This is a complex and dangerous task which too often leads to loss of lives among the human crisis managers themselves This book explains how unmanned search can be added to the toolkit of the search and rescue workers offering a valuable tool to save human lives and to speed up the search and rescue process The introduction of robotic tools in the world of search and rescue is not straightforward due to the fact that the search and rescue context is extremely technology unfriendly meaning that very robust solutions which can be deployed extremely quickly are required Multiple research projects across the world are tackling this problem and in this book a special focus is placed on showcasing the results of the European Union ICARUS project on this subject The ICARUS project proposes to equip first responders with a comprehensive and integrated set of unmanned search and rescue tools to increase the situational awareness of human crisis managers so that more work can be done in a shorter amount of time The ICARUS tools consist of assistive unmanned air ground and sea vehicles equipped with victim detection sensors The unmanned vehicles collaborate as a coordinated team communicating via ad hoc cognitive radio networking To ensure optimal human robot collaboration these tools are seamlessly integrated into the command and control equipment of the human crisis managers and a set of training and support tools is provided to them in order to learn to use the ICARUS system The research leading to these results has received funding from the European Community s Seventh Framework Programme FP7 2007 2013 under grant agreement number 285417 The publishing of this book was funded by the EC FP7 Post Grant Open Access Pilot programme

5G Spectrum and Standards Geoff Varrall,2016-05-31 This new resource provides key insight into future 5G radio systems and the technical and economic impact on industries communities and end users The book offers a comprehensive understanding of the options available for teams tasked with bringing 5G products and services to market or developing supporting standards and regulatory frameworks Readers find contemporary examples of millimeter band radio hardware including 60 GHz and V band and E Band point to point radio This book demonstrates the profound progress with 4G radio signal processing and RF hardware to reveal its potential applicability to 5G radio systems It shows how 5G systems are capable of delivering data rates that are ten to one hundred times faster than 4G systems Developments in spatial processing and beam forming in local area radio networks are presented and the challenge of scaling these systems to wide area radio is explored This book reviews military and space radio and automotive radar innovation with direct relevance to 5G radio design

LTE-Advanced Air Interface Technology Xincheng Zhang,Xiaojin Zhou,2012-09-05

Opportunities are at hand for professionals eager to learn and apply the latest theories and practices in air interface technologies. Written by experienced researchers and professionals, *LTE Advanced Air Interface Technology* thoroughly covers the performance targets and technology components studied by 3GPP for LTE Advanced. Besides being an explanatory text about LTE Advanced air interface technology, this book exploits the technical details in the 3GPP specification and explains the motivation and implication behind the specifications. After a general description of wireless cellular technology evolution and the performance targets and major technical features of LTE Advanced, *LTE Advanced Air Interface Technology* discusses various innovative technical features in detail, including innovative concepts in carrier aggregation techniques, Collaborative multipoint CoMP theory and performance analysis, Enhanced multi-antenna solutions or multiple input multiple output MIMO technology in particular multi-user and multi-layer MIMO, Relaying issues, Self-organizing and heterogeneous networks, Interference suppression and enhanced inter-cell interference coordination eICIC technology. This book opens the door of LTE-A technology for practitioners in any stage of wireless communications. Beginning with basic communication principles, the book demonstrates how a complete wireless theory is built. Readers can work independently on original case studies and simulation programming examples with an emphasis on technology and performance. Designed for professionals interested in gaining an upper hand, this book is the ideal educational and informative resource in the emerging field of air interface technology.

Computer Aided Control Systems Design 2000 (CACSD 2000) J. O. Gray, 2001. This Proceedings contains the papers presented at the 8th IFAC Symposium on Computer Aided Control Systems Design held at Salford, UK on 11-13 September 2000. Modelling has emerged as a central issue here and industrial users require the development of modelling languages for both analyses and design as well as generic models and tools which can be used for system identification, optimisation and fault diagnostics. Linear lumped parameter systems of general complexity are currently well addressed by a range of commercially available packages. However, there is a dearth of tools suitable for the analysis and synthesis of large scale distributed non-linear hybrid and stochastic systems which are increasingly a feature in modern manufacturing and process engineering. As the scale of the problems to be addressed increases, there is a need for numerically robust and efficient computational procedures linked to powerful interactive graphical interfaces which maximise the use of limited human resources and of course standardised data bases which can be used with a wide range of analysis and design procedures. Topics covered included the now traditional domains of algorithm architectures and tools and there was a very welcome emphasis on applications where no less than four sessions were devoted to this important aspect.

The LTE / SAE Deployment Handbook Jyrki T. J. Penttinen, 2011-11-30. Describing the essential aspects that need to be considered during the deployment and operational phases of 3GPP LTE SAE networks, this book gives a complete picture of LTE systems as well as providing many examples from operational networks. It demystifies the structure, functioning, planning and measurements of both the radio and core aspects of the evolved 3G system. The content includes an overview of the LTE

SAE environment architectural and functional descriptions of the radio and core network functionality of the LTE applications international roaming principles security solutions and network measurement methods In addition this book gives essential guidelines and recommendations about the transition from earlier mobile communications systems towards the LTE SAE era and the next generation of LTE LTE Advanced The book is especially suitable for the operators that face new challenges in the planning and deployment phases of LTE SAE and is also useful for network vendors service providers telecommunications consultancy companies and technical institutes as it provides practical information about the realities of the system Presents the complete end to end planning and measurement guidelines for the realistic deployment of networks Explains the essential and realistic aspects of commercial LTE systems as well as the future possibilities An essential tool during the development of transition strategies from other network solutions towards LTE SAE Contains real world case studies and examples to help readers understand the practical side of the system Advanced Solutions in Diagnostics and Fault Tolerant Control Jan M. Kościelny, Michał Syfert, Anna Szyber, 2017-07-28 This book highlights the latest achievements concerning the theory methods and practice of fault diagnostics fault tolerant systems and cyber safety When considering the diagnostics of industrial processes and systems increasingly important safety issues cannot be ignored In this context diagnostics plays a crucial role as a primary measure of the improvement of the overall system safety integrity level Obtaining the desired diagnostic coverage or providing an appropriate level of inviolability of the integrity of a system is now practically inconceivable without the use of fault detection and isolation methods Given the breadth and depth of its coverage the book will be of interest to researchers faced with the challenge of designing technical and medical diagnosis systems as well as junior researchers and students in the fields of automatic control robotics computer science and artificial intelligence

Artificial Neural Networks for Intelligent Manufacturing C.H. Dagli,2012-12-06 The quest for building systems that can function automatically has attracted a lot of attention over the centuries and created continuous research activities As users of these systems we have never been satisfied and demand more from the artifacts that are

designed and manufactured The current trend is to build autonomous systems that can adapt to changes in their environment While there is a lot to be done before we reach this point it is not possible to separate manufacturing systems from this trend The desire to achieve fully automated manufacturing systems is here to stay Manufacturing systems of the twenty first century will demand more flexibility in product design process planning scheduling and process control This may well be achieved through integrated software and hardware architectures that generate current decisions based on information collected from manufacturing systems environment and execute these decisions by converting them into signals transferred through communication network Manufacturing technology has not yet reached this state However the urge for achieving this goal is transferred into the term Intelligent Systems that we started to use more in late 1980s Knowledge based systems our first efforts in this endeavor were not sufficient to generate the Intelligence required our quest still continues Artificial neural network technology is becoming an integral part of intelligent manufacturing systems and will have a profound impact on the design of autonomous engineering systems over the next few years
