

Electromagnetic (EM) Waves Study Guide

Vocabulary / Concepts

Electromagnetic Wave - A transverse wave produced by the acceleration of charged particles. Electromagnetic waves are made up of magnetic fields and electric fields that are perpendicularly oriented. All electromagnetic waves travel at light speed (about 3×10^8 m/s, or 300,000 km/s) in a vacuum.

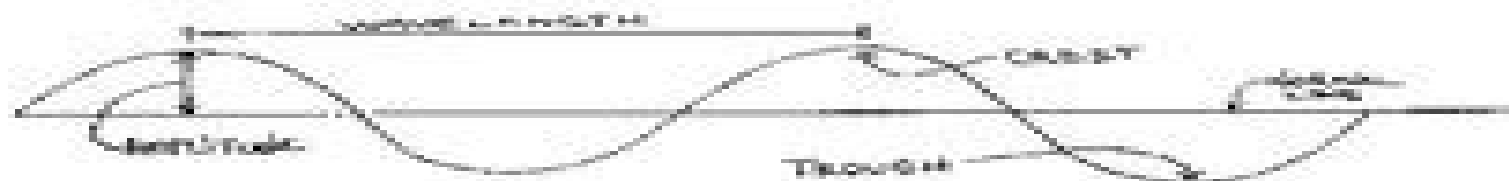

Electromagnetic Spectrum - This contains all the wavelength ranges of electromagnetic waves. EM waves are also referred to as "electromagnetic radiation".

IMPORTANT: The only difference between the wave ranges is wavelength and how the waves were produced! They are all made of the same stuff: electric and magnetic fields.

EM Wave Ranges (listed from longest to shortest wavelength)

Spectrum	1) Radio	→ produced by electron acceleration in wires, plasmas, etc.
	2) Infrared (IR)	→ produced by the vibrations of atoms and molecules. All matter in the universe emits it all the time.
	3) Visible	→ produced by electrons jumping from a higher energy level to a lower energy level. Sunlight.
	4) Ultraviolet (UV)	→ Produced by electrons jumping from a higher energy level to a lower energy level. These jumps involve larger leaps than those in visible.
	5) X-ray	→ Produced by very large electron jumps from high energy levels to very low energy levels.
	6) Gamma	→ Produced by proton accelerations caused by nuclear reactions.

Wave - A wave is a disturbance that carries energy from one place to another place. Although EM waves don't actually look like this, we represent all waves as having the following characteristics:

Kunkel,2019-07-11 This book provides a new more accurate and efficient way for design engineers to understand electromagnetic theory and practice as it relates to the shielding of electrical and electronic equipment The author starts by defining an electromagnetic wave and goes on to explain the shielding of electromagnetic waves using the basic laws of physics This is a new approach for the understanding of EMI shielding of barriers apertures and seams It provides a reliable systematic approach that is easily understood by design engineers for the purpose of packaging the electrical and electronic systems of the future This book covers both theory and practical application emphasizing the use of transfer impedance to explain fully the penetration of an electromagnetic wave through an EMI gasketed seam Accurate methods of testing shielding components such as EMI gaskets shielded cables and connectors shielded air vent materials conductive glass and conductive paint are also covered Describes in detail why the currently accepted theory of shielding needs improvement Discusses the penetration of an electromagnetic wave through shielding barrier materials and electromagnetic interference EMI gasketed seams Emphasizes the use of transfer impedance to explain the penetration of an electromagnetic wave through an EMI gasketed seam The definition of an electromagnetic wave and how it is generated is included Chapter in the book are included that reinforce the presented theory **Spacecraft Electromagnetic Compatibility Technologies** Hua Zhang,Yuting Zhang,Chengbo Huang,Yanxing Yuan,Lili Cheng,2020-07-27 This book explores key techniques and methods in electromagnetic compatibility management analysis design improvement and test verification for spacecraft The first part introduces the general EMC technology of spacecraft the electromagnetic interference control method and management of electromagnetic compatibility The second part discusses the EMC prediction analysis technique and its application in spacecraft while the third presents the EMC design of spacecraft modules and typical equipment The final two parts address spacecraft magnetic design testing technologies and spacecraft testing technologies The book also covers the program control test process the special power control unit PCU electric propulsion PIM test and multipaction testing for spacecraft making it a valuable resource for researchers and engineers alike **IMU CET 2024 : Indian Maritime University Common Entrance Test - 10 Mock Tests and 10 Sectional Tests (2400 Solved Questions)** EduGorilla Prep Experts,2022-12-06 Best Selling Book for IMU CET Indian Maritime University Common Entrance Test with objective type questions as per the latest syllabus given by the Indian Maritime University IMU CET Entrance Exam Preparation Kit comes with 20 Tests 10 Mock Tests 10 Sectional Tests with the best quality content Increase your chances of selection by 16X IMU CET Entrance Exam Prep Kit comes with well structured and 100% detailed solutions for all the questions Clear exam with good grades using thoroughly Researched

Waves and Oscillations Walter Fox Smith, 2010-05-20 Waves and oscillations permeate virtually every field of current physics research are central to chemistry and are essential to much of engineering Furthermore the concepts and mathematical techniques used for serious study of waves and oscillations form the foundation for quantum mechanics Once they have mastered these ideas in a classical context students will be ready to focus on the challenging concepts of quantum mechanics when they encounter them rather than struggling with techniques This lively textbook gives a thorough grounding in complex exponentials and the key aspects of differential equations and matrix math no prior experience is assumed The parallels between normal mode analysis orthogonal function analysis especially Fourier analysis and superpositions of quantum states are clearly drawn without actually getting into the quantum mechanics An in depth accessible introduction to Hilbert space and bra ket notation begins in Chapter 5 on symmetrical coupled oscillators emphasizing the analogy with conventional dot products and continues in subsequent chapters Connections to current physics research atomic force microscopy chaos supersolids micro electro mechanical systems MEMS magnetic resonance imaging carbon nanotubes and more are highlighted in the text and in end of chapter problems and are frequently updated in the associated website The book actively engages readers with a refreshing writing style and a set of carefully applied learning tools such as in text concept tests your

turn boxes in which the student fills in one or two steps of a derivation concept and skill inventories for each chapter and wrong way problems in which the student explains the flaw in a line of reasoning These tools promote self awareness of the learning process The associated website features custom developed applets video and audio recordings additional problems and links to related current research The instructor only part includes difficulty ratings for problems optional hints full solutions and additional support materials
