Electronics Buying Guide ,2008 *GPS Tracking with Java EE Components* Kristof Beiglböck,2018-08-06 GPS Tracking with Java EE Components Challenges of Connected Cars highlights how the self driving car is actually changing the automotive industry from programing embedded software to hosting services and data crunching in real time with really big data The book analyzes how the challenges of the Self Driving Car SDC exceed the limits of a classical GPS Tracking System GTS It provides a guidebook on setting up a tracking system by customizing its components It also provides an overview of the prototyping and modeling process and how the reader can modify this process for his or her own software Every component is introduced in detail and includes a number of design decisions for development The book introduces Java EE JEE Modules and shows how they can be combined to a customizable GTS and used as seed components to enrich existing

systems with live tracking The book also explores how to merge tracking and mapping to guide SDCs and focuses on client server programming to provide useful information It also discusses the challenges involved with the live coordination of moving cars This book is designed to aid GTS developers and engineers in the automotive industry It can also help Java Developers not only interested in GPS Tracking but in modern software design from many individual modules Source code and sample applications will be available on the book s website

A High-Rate Virtual Instrument of Marine Vehicle Motions for Underwater Navigation and Ocean Remote Sensing Chrystel Gelin,2012-08-22 Dead Reckoning aided with Doppler velocity measurement has been the most common method for underwater navigation for small vehicles Unfortunately DR requires frequent position recalibrations and underwater vehicle navigation systems are limited to periodic position update when they surface Finally standard Global Positioning System GPS receivers are unable to provide the rate or precision required when used on a small vessel To overcome this a low cost high rate motion measurement system for an Unmanned Surface Vehicle USV with underwater and oceanographic purposes is proposed The proposed onboard system for the USV consists of an Inertial Measurement Unit IMU with accelerometers and rate gyros a GPS receiver a flux gate compass a roll and tilt sensor and an ADCP Interfacing all the sensors proved rather challenging because of their different characteristics The proposed data fusion technique integrates the sensors and develops an embeddable software package using real time data fusion methods for a USV to aid in navigation and control as well as controlling an onboard Acoustic Doppler Current Profiler ADCP While ADCPs non intrusively measure water flow the vessel motion needs to be removed to analyze the data and the system developed provides the motion measurements and processing to accomplish this task
