

Section-1: General Ability

1. Seven machines take 7 minutes to make 7 identical toys. At the same time, how many minutes would it take for 100 machines to make 100 toys?

(A) 1 (B) 7 (C) 100 (D) 700

Key: (B)

Sol: $\frac{7 \times 7}{7} = \frac{100 \times T_1}{100}$
 $\Rightarrow T_1 = 7 \text{ minutes}$

2. "Her ____ should not be confused with miserliness she is every willing to assist those in need"
 The word that best fills the blank in the above sentence is

(A) cleanliness (B) punctuality (C) frugality (D) greatness

Key: (C)

Sol: The sentence explains that the person spoken of is not miserly, since she is quite prepared to be generous. So for the sentence to make sense, the word filling the blank has to be something that is consistent with generosity and yet might, by those without a full understanding of her behaviour, be mistaken for miserliness. The words "frugality" and thrift fulfill this requirement and yield two sentences that are alike in meaning. Thus the correct answer is frugality.

3. A number consists of two digits. Then sum of the digits is 9. If 45 is subtracted from the number, its digits are interchanged. What is the number?

(A) 63 (B) 72 (C) 81 (D) 90

Key: (B)

Sol: Let number be 'xy'

Given $x + y = 9 \quad \dots (i)$

& $xy - 45 = yx$

$\Rightarrow (10x + xy) - 45 = 10y + x$

$\Rightarrow 9x - 9y = 45$

$\Rightarrow x - y = 5 \quad \dots (ii)$

solving (i) & (ii) $\Rightarrow x = 7, y = 2$

Required number = 72

Repairing and Querying Databases under Aggregate Constraints Sergio

Flesca,Filippo Furfaro,Francesco Parisi,2011-10-20 Research has deeply investigated several issues related to the use of integrity constraints on relational databases In particular a great deal of attention has been devoted to the problem of extracting reliable information from databases containing pieces of information inconsistent with regard to some integrity constraints In this manuscript the problem of extracting consistent information from relational databases violating integrity constraints on numerical data is addressed Aggregate constraints defined as linear inequalities on aggregate sum queries on input data are considered The notion of repair as consistent set of updates at attribute value level is exploited and the characterization of several data complexity issues related to repairing data and computing consistent query answers is provided Moreover a method for computing reasonable repairs of inconsistent numerical databases is introduced for a restricted but expressive class of aggregate constraints An extension of this method for dealing with the data repairing problem in the presence of weak aggregate constraints which are expected to be satisfied but not required to is presented Furthermore a technique for computing consistent answers of aggregate queries in the presence of a wide form of aggregate constraints is provided Finally extensions of the framework as well as several open problems are discussed **Bridging**

Reading Aloud and Speech Production Simone Sulpizio,Sachiko Kinoshita,2016-07-25 For decades human cognition involved in reading aloud and speech production has been investigated extensively a quote search of the two in google scholar produces about 83 000 and 255 000 results respectively This large amount of research has produced quite detailed descriptions of the cognitive mechanisms that allow people to speak or to read aloud a word However despite the fact that reading aloud and speech production share some processes generation of phonology and preparation of a motor speech response the research in this two areas seems to have taken parallel and independent tracks with almost no contact between the two The present Research Topic takes an initial step towards building a bridge that will link the two research areas as we believe that such an endeavour is essential for moving forward in our understanding of how the mind brain processes words To this aim we encourage contributions exploring the relation between speech production and reading aloud The questions the Research Topic should address include but are not limited to the following To what extent are speech production and word reading reading aloud similar Are there some shared components and or mechanisms between the two process Is the time course of the supposed shared mechanisms activation similar in the two processes How does the different input conceptual vs orthographic interact with the types of information that reading and speaking share semantic and phonological knowledge articulatory codes How does a difference in the input affect the supposed common stages of processing i e phonological encoding and articulatory planning and execution We welcome any kind of contribution e g original research article review opinion that answers the above or other questions related to the Topic Knowledge Graphs Mayank Kejriwal,Craig A.
