

Activity 1: 10/10/2025

Reading: read the first two sections on genetic variation in *periplaneta americana* (page 1) of the following questions. Respond to these prior understanding of the concepts discussed in the lecture.

1. Match each of the following changes in chromosome structure to its definition:

☒ A. Crossing

☐ B. Duplication

☐ C. Inversion

☐ D. Translocation

1a. is fusion of 2 chromosomes by their ends

1b. is piece of chromosome is deleted

1c. is segment of one chromosome is removed and substituted with different one from different chromosome

1d. is fusion of 2 chromosomes (segment from one chromosome is added to other)

2. How many genetically different gametes can be produced from a diploid cell with 4 pairs of chromosomes (pairs)? Explain your answer.

Answer: the number of genetically different gametes that can be produced is equal to 2^n where n is total number of chromosomes pairs. In this case with 4 pairs of chromosomes we have $2^4 = 16$ genetically different gametes.

3. Although you will learn in next lecture of health from your parents, you may wonder that some traits are the less inheritable characteristics. For example, hair colour and eye colour. Why may some traits be inherited together?

These traits are inherited together and travel on the same chromosome. Therefore, these are not passed separately or together, and a single gene only codes for one trait. Mendelian inheritance shows traits will be passed with some other trait in the gametes. In this case, hair colour will be inherited together.

4. Describe the alignment of chromosomes during prophase I, write the sequence:

During prophase I synapsis occurs and homologous chromosomes align together, called bivalent. This is important because it allows the crossing over to occur and results in new genetic combinations.

5. How does recombination lead to chromosomal polymorphism number? Describe two types of genetic disorders that can result from recombination.

Advanced Pre Med Studies Course Description Semester 1 From surgery to vaccines man has made great strides in the field of medicine Quality of life has improved dramatically in the last few decades alone and the future is bright But students must not forget that God provided humans with minds and resources to bring about these advances A biblical perspective of healing and the use of medicine provides the best foundation for treating diseases and injury

In *Exploring the History of Medicine* author John Hudson Tiner reveals the spectacular discoveries that started with men and women who used their abilities to better mankind and give glory to God The fascinating history of medicine comes alive in this book providing students with a healthy dose of facts mini biographies and vintage illustrations It seems that a new and more terrible disease is touted on the news almost daily The spread of these scary diseases from bird flu to SARS to AIDS is a cause for concern and leads to questions such as Where did all these germs come from and how do they fit into a biblical world view What kind of function did these microbes have before the Fall Does antibiotic resistance in bacteria prove evolution How can something so small have such a huge deadly impact on the world around us Professor Alan Gillen sheds light on these and many other questions in *The Genesis of Germs* He shows how these constantly mutating diseases are proof for devolution rather than evolution and how all of these germs fit into a biblical world view Dr Gillen shows how germs are symptomatic of the literal Fall and Curse of creation as a result of man's sin and the hope we have in the coming of Jesus Christ

Semester 2 *Body by Design* defines the basic anatomy and physiology in each of 11 body systems from a creationist viewpoint Every chapter explores the wonder beauty and creation of the human body giving evidence for creation while exposing faulty evolutionist reasoning Special

explorations into each body system look closely at disease aspects current events and discoveries while profiling the classic and contemporary scientists and physicians who have made remarkable breakthroughs in studies of the different areas of the human body Within Building Blocks in Life Science you will discover exceptional insights and clarity to patterns of order in living things including the promise of healing and new birth in Christ Study numerous ways to refute the evolutionary worldview that life simply evolved by chance over millions of years The evolutionary worldview can be found filtered through every topic at every age level in our society It has become the overwhelmingly accepted paradigm for the origins of life as taught in all secular institutions This dynamic education resource helps young people not only learn science from a biblical perspective but also helps them know how to defend their faith in the process [Science Insights](#) ,1999 *Arguing From Evidence in Middle School Science* Jonathan Osborne,Brian M.
