 David J. Evans, 1972 The aim of these conferences is to present practical exposition on computers computing and software to foster user acceptance Now it can be clearly seen that computer systems are going to become more complex both front and rear end processors are going to be attached on the main frame computer to provide communication networks interactive graphics etc There will be a need for software for a variety of purposes and will no doubt become even more specialized over time This conference discussed computer software systems in banking commercial technical industrial and university environments which resulted in particularly stimulating discussions which are included with these proceedings

*Evolutionary Algorithms in Theory and Practice* Thomas Back, 1996-01-11 This book presents a unified view of evolutionary algorithms the exciting new probabilistic search tools inspired by biological models that have immense potential as practical problem solvers in a wide variety of settings academic commercial and industrial In this work the author compares the three most prominent representatives of evolutionary algorithms genetic algorithms evolution strategies and evolutionary programming The algorithms are presented within a unified framework thereby clarifying the similarities and

differences of these methods The author also presents new results regarding the role of mutation and selection in genetic algorithms showing how mutation seems to be much more important for the performance of genetic algorithms than usually assumed The interaction of selection and mutation and the impact of the binary code are further topics of interest Some of the theoretical results are also confirmed by performing an experiment in meta evolution on a parallel computer The meta algorithm used in this experiment combines components from evolution strategies and genetic algorithms to yield a hybrid capable of handling mixed integer optimization problems As a detailed description of the algorithms with practical guidelines for usage and implementation this work will interest a wide range of researchers in computer science and engineering disciplines as well as graduate students in these fields
