Domain Generalization with Machine Learning in the NOvA Experiment Andrew T.C. Sutton,2023-11-08 This thesis presents significant advances in the use of neural networks to study the properties of neutrinos Machine learning tools like neural networks NN can be used to identify the particle types or determine their energies in detectors such as those used in the NOvA neutrino experiment which studies changes in a beam of neutrinos as it propagates approximately 800 km through the earth NOvA relies heavily on simulations of the physics processes and the detector response these simulations work well but do not match the real experiment perfectly Thus neural networks trained on simulated datasets must include systematic uncertainties that account for possible imperfections in the simulation This thesis presents the first application in HEP of adversarial domain generalization to a regression neural network Applying domain generalization to problems with large systematic variations will reduce the impact of uncertainties while avoiding the risk of falsely constraining the phase space Reducing the impact of systematic uncertainties makes NOvA analysis more robust and improves the significance of experimental results      **Energy Research Abstracts** ,1986      **The Shareware Compendium** Rob Rosenberger,1993 An official product of the Association of Shareware Professionals this compendium ensures user access to current high quality software programs from association authors who continue to offer assistance after the sale Readers will find descriptions of over 700 shareware programs available explicit contact information to obtain the programs and ways to receive daily software updates      *Bibliography of Agriculture* ,1971-12      **Industrial Arts Index** ,1929      **Government Reports**
