Journal of Character Education Jacques S. Benninga, Marvin W Berkowitz, 2021-04-01 Sample Chapters FOR THE BETTER Marvin W Berkowitz University of Missouri St Louis THE OVERLOOKED INEQUITY Eric Schaps The Journal of Character Education is the only professional journal in education devoted to character education It is designed to cover the field from the latest research to applied best practices We include original research reports editorials and conceptual articles by the best minds in our field reviews of the latest books and other relevant strategies and manuscripts by educators that describe best practices in teaching and learning related to character education The Journal of Character Education has for over a decade been the sole scholarly journal focused on research theory measurement and practice of character education In this issue of the Journal of Character Education we return to something foundational and introduce something new The foundational element is a set of six independent scholarly manuscripts by a mix of emerging and established scholars We are pleased to introduce a new feature of the Journal of Character Education in this issue namely a section we are calling simply Opinion We began the JCE with an exclusive focus on publishing scholarship because there was no scholarly journal that focused on character education Over time we realized that we wanted to speak about practice and particularly to practitioners as well Hence we created a section we call Voices to present innovations and perspectives representing the voices of exemplary practitioners of character education Now we introduce the Opinion section that will allow us to publish perspectives from leading authorities in the field that might be more provocative We would love to hear responses to either or both opinion articles and are working on plans to share such responses perhaps on one of our related websites At this point we plan on publishing more opinion articles and for now by invitation However we are always willing to consider unsolicited articles for possible inclusion in the JCE

Industrial Arts Index, 1927 Design Methodologies for Space Transportation Systems Walter Edward Hammond, 2001 Annotation Design Methodologies for Space Transportation Systems is a sequel to the author's earlier text Space Transportation A Systems Approach to Analysis and Design Both texts represent the most comprehensive exposition of the existing knowledge and practice in the design and project management of space transportation systems and they reflect a wealth of experience by the author with the design and management of space systems The text discusses new conceptual changes in the design philosophy away from multistage expendable vehicles to winged reusable launch vehicles and presents an overview of the systems engineering and vehicle design process as well as systems trades and analysis Individual chapters are devoted to specific disciplines such as aerodynamics aerothermal analysis structures materials propulsion flight mechanics and trajectories avionics and computers and control systems The final chapters deal with human factors payload launch and mission operations safety and mission assurance The two texts by the author provide a valuable source of information for the space transportation community of designers operators and managers A companion CD ROM succinctly packages some oversized figures and tables resources for systems engineering

Exploring Electron-Neutrino-Argon Interactions Krishan V. J. Mistry, 2023-01-01 This thesis explores the electron neutrino and antineutrino cross section on argon using the MicroBooNE liquid argon time projection chamber detector With only a handful of electron neutrino cross section measurements in the hundred MeV to GeV range to date and only one of them on argon as the target nucleus the result from the ArgoNeuT experiment there is a need for new large statistics electron neutrino cross section measurements The precise knowledge of the electron neutrino cross section is fundamental for tests of lepton universality making meaningful interpretations of neutrino oscillations and beyond the Standard Model search experiments involving electron neutrinos Moreover the appearance of electron neutrinos in a beam of predominantly muon neutrinos is the key signature in searches for sterile neutrinos in short baseline experiments and measurements of Charge Parity violation in long baseline oscillation experiments The measurements in this thesis utilize the NuMI neutrino beamline which is highly off axis to the MicroBooNE detector but provides a rich source of electron neutrinos Critical to the measurement of the cross section is a detailed understanding of the flux of neutrinos at MicroBooNE and the uncertainties associated with it The neutrino flux prediction tools used for the on axis NuMI experiments are described and studied in detail for their implementation in the case of MicroBooNE These tools will form the foundation for many future measurements using the NuMI beam at MicroBooNE With the use of argon as a target for studying neutrino interactions the large size of the nucleus introduces nuclear effects which impact the kinematics and multiplicities of the particles produced in the initial interaction Such effects are complicated to model and are currently an active area of research with various models and neutrino generators available The measurements in this thesis compare the electron neutrino argon cross section to several neutrino generators with differing physics models These comparisons provide important information in the modelling of neutrino interactions with nuclei such as argon The target audience for this thesis is aimed at particle physics graduate students particularly in the field of neutrino physics working with noble element time projection chambers
