The History of Town Planning in a Dependent State Louis C. Wassenhoven, 2025-09-01 This book is based on research carried out by the author in Greece addressed initially to Greek readers mainly researchers of the Department of Urban and Regional Planning National Technical University of Athens where he served for a long time as professor However a great deal of the research has a definite international interest and its results form the backbone of his new undertaking in English Although some of the observations included in the initial project are reproduced here the gist of the author s arguments dwells on issues which are

not of a narrow national interest This book interests students and historians of town planning whose area of reference is not only Europe but also the countries which have been through a state of dependence and external domination and had to import foreign planning ideas and concepts The author tries to embrace a broad spectrum of urban planning ideas developments and influences which dominated the 19th century planning practice of a country which had just achieved political independence but was still practically a protectorate of the great powers of the time often referred to as the Protecting Powers Great Britain France and Russia Every aspect of domestic policies and developments was directly dictated or indirectly influenced by the choices policies laws and actions of these external forces It was also influenced by the advice and expert opinions of foreigners or even of Greeks whose mode of conceptualizing the problems of the dependent country had been deeply affected by their life or education in foreign lands Looking at this state of affairs more than two centuries after the 1821 Greek War of Independence demands full awareness of these conditions **1000 Ideas by 100 Architects** Sergi Costa Duran, Mariana R. Eguaras, 2009-11-15 Architecture is an art form that provides both function and beauty Each architect brings something uniquely distinct to his or her work Learning what makes an architectural work or the body of an architect's work unique is difficult to deconstruct This book provides behind the scenes insight into the work of 100 top international designers through the deconstruction of 1000 architectural details and projects An unrivaled sourcebook for ideas this collection also provides details and information that are not available on this level through any other source

Explorations in the History and Heritage of Machines and Mechanisms Marco Ceccarelli, Rafael López-García, 2022-04-06 This book gathers the latest advances in the field of history of science and technology as presented by leading international researchers at the 7th International Symposium on History of Machines and Mechanisms HMM held in Granada and Jaén Spain on April 28-30 2022 The Symposium which was promoted by the permanent commission for the History of Machine and Mechanism Science MMS of IFToMM provided an international forum to present and discuss historical developments in the field of MMS The contents cover all aspects of the development of MMS from antiquity until the present era and its historiography modern reviews of past works engineers in history and their works the development of theories history of the design of machines and mechanisms historical developments of mechanical design and automation historical developments of teaching the history of schools of engineering the education of engineers The contributions which were selected by means of a rigorous international peer review process highlight numerous exciting ideas that will spur novel research directions and foster multidisciplinary collaborations *A Pattern Language* Christopher Alexander, 2018-09-20 You can use this book to design a house for yourself with your family you can use it to work with your neighbors to improve your town and neighborhood you can use it to design an office or a workshop or a public building And you can use it to guide you in the actual process of construction After a ten year silence Christopher Alexander and his colleagues at the Center for Environmental Structure are now publishing a major statement in the form of three books which will in their words lay the

basis for an entirely new approach to architecture building and planning which will we hope replace existing ideas and practices entirely The three books are The Timeless Way of Building The Oregon Experiment and this book A Pattern Language At the core of these books is the idea that people should design for themselves their own houses streets and communities This idea may be radical it implies a radical transformation of the architectural profession but it comes simply from the observation that most of the wonderful places of the world were not made by architects but by the people At the core of the books too is the point that in designing their environments people always rely on certain languages which like the languages we speak allow them to articulate and communicate an infinite variety of designs within a forma system which gives them coherence This book provides a language of this kind It will enable a person to make a design for almost any kind of building or any part of the built environment Patterns the units of this language are answers to design problems How high should a window sill be How many stories should a building have How much space in a neighborhood should be devoted to grass and trees More than 250 of the patterns in this pattern language are given each consists of a problem statement a discussion of the problem with an illustration and a solution As the authors say in their introduction many of the patterns are archetypal so deeply rooted in the nature of things that it seemly likely that they will be a part of human nature and human action as much in five hundred years as they are today
