Differential Geometry, Calculus of Variations, and Their Applications George M. Rassias,Themistocles M. Rassias,2023-05-31 This book contains a series of papers on some of the longstanding research problems of geometry calculus of variations and their applications It is suitable for advanced graduate students teachers research mathematicians and other professionals in mathematics   Regulators in Analysis, Geometry and Number Theory Alexander Reznikov,Norbert Schappacher,2012-12-06 This book is an outgrowth of the Workshop on Regulators in Analysis Geom etry and Number Theory held at the Edmund Landau Center for Research in Mathematical Analysis of The Hebrew University of Jerusalem in 1996 During the preparation and the holding of the workshop we were greatly helped by the director of the Landau Center Lior Tsafriri during the time of the planning of the conference and Hershel Farkas during the meeting itself Organizing and running this workshop was a true pleasure thanks to the expert technical help provided by the Landau Center in general and by its secretary Simcha Kojman in particular We would like to express our hearty thanks to all of them However the articles assembled in the present volume do not represent the proceedings of this workshop neither could all contributors to the book make it to the meeting nor do the contributions herein necessarily reflect talks given in Jerusalem In the introduction we outline our view of the theory to which this volume intends to contribute The crucial objective of the present volume is to bring together concepts methods and results from analysis differential as well as algebraic geometry and number theory in order to work towards a deeper and more comprehensive understanding of regulators and secondary invariants Our thanks go to all the participants of the workshop and authors of this volume May the readers of this book enjoy and profit from the combination of mathematical ideas here documented   Old and New Aspects in Spectral Geometry M.-E. Craioveanu,Mircea Puta,Themistocles M. Rassias,2001-10-31 It is known that to any Riemannian manifold M g with or without boundary one can associate certain fundamental objects Among them are the Laplace Beltrami opera tor and the Hodge de Rham operators which are natural that is they commute with the isometries of M g elliptic self adjoint second order differential operators acting on the space of real valued smooth functions on M and the spaces of smooth differential forms on M respectively If M is closed the spectrum of each such operator is an infinite divergent sequence of real numbers each eigenvalue being repeated according to its finite multiplicity Spectral Geometry is concerned with the spectra of these operators also the extent to which these spectra determine the geometry of M g and the topology of M This problem has been translated by several authors most notably M Kac into the col loquial question Can one hear the shape of a manifold because of its analogy with the wave equation This terminology was inspired from earlier results of H Weyl It is known that the above spectra cannot completely determine either the geometry of M g or the topology of M For instance there are examples of pairs of closed Riemannian manifolds with the same spectra corresponding to the Laplace Beltrami operators but which differ substantially in their geometry and which are even not homotopically equiva lent

'Fundamentals of Image, Audio, and Video Processing Using MATLAB®' and 'Fundamentals of Graphics Using MATLAB®' Ranjan Parekh,2022-02-28 This discounted two book set contains BOTH Fundamentals of Image Audio and Video Processing Using MATLAB introduces the concepts and principles of media processing and its applications in pattern recognition by adopting a hands on approach using program implementations The book covers the tools and techniques for reading modifying and writing image audio and video files using the data analysis and visualization tool MATLAB This is a perfect companion for graduate and post graduate students studying courses on image processing speech and language processing signal processing video object detection and tracking and related multimedia technologies with a focus on practical implementations using programming constructs and skill developments It will also appeal to researchers in the field of pattern recognition computer vision and content based retrieval and for students of MATLAB courses dealing with media processing statistical analysis and data visualization Fundamentals of Graphics Using MATLAB introduces fundamental concepts and principles of 2D and 3D graphics and is written for undergraduate and postgraduate students of computer science graphics multimedia and data science It demonstrates the use of MATLAB programming for solving problems related to graphics and discusses a variety of visualization tools to generate graphs and plots The book covers important concepts like transformation projection surface generation parametric representation curve fitting interpolation vector representation and texture mapping all of which can be used in a wide variety of educational and research fields Theoretical concepts are illustrated using a large number of practical examples and programming codes which can be used to visualize and verify the results **Integral Geometry and Representation Theory** I. M. Gel'fand,M. I. Graev,N. Ya. Vilenkin,2014-05-12 Generalized Functions Volume 5 Integral Geometry and Representation Theory is devoted to the theory of representations focusing on the group of two dimensional complex matrices of determinant one This book emphasizes that the theory of representations is a good example of the use of algebraic and geometric methods in functional analysis in which transformations are performed not on the points of a space but on the functions defined on it The topics discussed include Radon transform on a real affine space integral transforms in the complex domain and representations of the group of complex unimodular matrices in two dimensions The properties of the Fourier transform on G integral geometry in a space of constant curvature harmonic analysis on spaces homogeneous with respect to the Lorentz Group and invariance under translation and dilation are also described This volume is suitable for mathematicians specialists and students learning integral geometry and representation theory **TwentyTwo Papers on Algebra, Number Theory and Differential Geometry** M. S. Calenko,1964-12-31 Geometric Control Theory and Sub-Riemannian Geometry Gianna Stefani,Ugo Boscain,Jean-Paul Gauthier,Andrey Sarychev,Mario Sigalotti,2014-06-05 Honoring Andrei Agrachev s 60th birthday this volume presents recent advances in the interaction between Geometric Control Theory and sub Riemannian geometry On the one hand Geometric Control Theory used the differential geometric and Lie algebraic language for studying controllability

motion planning stabilizability and optimality for control systems The geometric approach turned out to be fruitful in applications to robotics vision modeling mathematical physics etc On the other hand Riemannian geometry and its generalizations such as sub Riemannian Finslerian geometry etc have been actively adopting methods developed in the scope of geometric control Application of these methods has led to important results regarding geometry of sub Riemannian spaces regularity of sub Riemannian distances properties of the group of diffeomorphisms of sub Riemannian manifolds local geometry and equivalence of distributions and sub Riemannian structures regularity of the Hausdorff volume etc Using Algebraic Geometry David A. Cox,John Little,DONAL OSHEA,2013-04-17 In recent years the discovery of new algorithms for dealing with polynomial equations coupled with their implementation on fast inexpensive computers has sparked a minor revolution in the study and practice of algebraic geometry These algorithmic methods have also given rise to some exciting new applications of algebraic geometry This book illustrates the many uses of algebraic geometry highlighting some of the more recent applications of Grobner bases and resultants In order to do this the authors provide an introduction to some algebraic objects and techniques which are more advanced than one typically encounters in a first course but nonetheless of great utility The book is written for nonspecialists and for readers with a diverse range of backgrounds It assumes knowledge of the material covered in a standard undergraduate course in abstract algebra and it would help to have some previous exposure to Grobner bases The book does not assume the reader is familiar with more advanced concepts such as modules New Visual Perspectives on Fibonacci Numbers Krassimir T. Atanassov,2002 Discusses new ground on Fibonacci sequences and the well known Fibonacci numbers There is a continuing emphasis on diagrams both geometric and combinatorial which helps to tie disparate topics together weaving around the unifying themes of the golden mean and various generalizations of the Fibonacci recurrence relation Automated Deduction in Geometry Jürgen Richter-Gebert,Dongming Wang,2001-09-12 This book constitutes the thoroughly refereed post proceedings of the Third International Workshop on Automated Deduction in Geometry ADG 2000 held in Zurich Switzerland in September 2000 The 16 revised full papers and two invited papers presented were carefully selected for publication during two rounds of reviewing and revision from a total of initially 31 submissions Among the issues addressed are spatial constraint solving automated proving of geometric inequalities algebraic proof semi algebraic proofs geometrical reasoning computational synthetic geometry incidence geometry and nonstandard geometric proofs **Algebraic Geometry** Mauro C. Beltrametti,Fabrizio Catanese,Ciro Ciliberto,Antonio Lanteri,Claudio Pedrini,2008-08-22 The volume consists of invited refereed research papers The contributions cover a wide spectrum in algebraic geometry from motives theory to numerical algebraic geometry and are mainly focused on higher dimensional varieties and Minimal Model Program and surfaces of general type A part of the articles grew out a Conference in memory of Paolo Francia 1951 2000 held in Genova in September 2001 with about 70 participants **Deformations of Mathematical Structures** Julian
