Aircraft/pavement Technology Frank V. Hermann,1997 *Proceedings* ,1997 *Developments in Computer Aided Design and Modelling for Civil Engineering* B. H. V. Topping,1995 Includes a selection of papers presented at the Sixth International Conference on Computing in Civil and Structural Engineering and the Fourth International Conference on the Application of Artificial Intelligence to Civil and Structural Engineering held at Cambridge England 28 30 August 1995 **A Surface Performance-graded (SPG) Specification for Surface Treatment Binders** Lubinda F. Walubita,2005 Presently surface treatment design and material selection is based on traditional specifications and experience which are not performance based and sometimes result in inadequate performance of the surface treatment In 2000 the first phase of a Texas Department of Transportation TxDOT research project developed a surface performance graded SPG specification for the selection of surface treatment binders Research Report 1710 1 The SPG specification is performance based and utilizes binder properties directly related to surface treatment performance and associated distress The specification takes into account environmental conditions aging effects of the binder visco elastic behavior and reliability The objective of this second phase of the project was to investigate and establish the validity and applicability of the proposed SPG specification make modifications where necessary and finally recommend the SPG specification for practical implementation The research methodology involved highway section identification laboratory testing including SPG grading performance monitoring and comparison of the SPG binder grades to actual field performance Factors included in the experimental design were binder type and suppliers environment aggregates and traffic Analyses of the results showed that there is generally a good correlation between the proposed SPG specification and actual field performance Overall the results are indicative that the SPG specification is functional and if properly applied the specification promises to be a relatively cost effective method for selecting binders to ensure adequate surface treatment performance However further validation is recommended possibly with controlled test sections to fully investigate the effects of design construction and quality control processes and address some of the deficiencies of the specification *Transportation Research Record* ,1998 **Proceedings of the Eighth International Conference on Civil and Structural Engineering Computing** B. H. V. Topping,2001 Contains the extended abstracts of the contributed papers that were presented at the Eighth International Conference on Civil Structural Engineering Computing which was held in Eisenstadt Vienna Austria from 19 21 September 2001 The full length papers are available in electronic format on the accompanying CD ROM
