Faith in Foreign Aid Susan Turner Haynes,2024-07-12 The United States contributes more foreign aid than any other state in the world and it is often recognized as a leader in engaging religious organizations in aid delivery Faith in Foreign Aid is the first book to closely examine how the relationship between religious organizations and USAID plays out in practice Faith in Foreign Aid relies on an original dataset to trace faith based funding patterns in US foreign aid from 2001 to 2021 The findings show that despite America s push to engage religious organizations in aid the total number of religious organizations it funds is relatively low especially when compared with the number of USAID s secular partners These faith based organizations FBOs also represent the minority of US based development FBOs broadly Relying on extensive original survey and interview data the book suggests that many religious organizations are deterred from applying for public funding because they perceive the government as biased against them or fear their religious mission might be challenged In addition to investigating why some FBOs eschew government funds the book also examines why some FBOs choose to partner with USAID and what this relationship can look like Faith in Foreign Aid highlights the voices and experiences of FBOs showing a way for more effective engagement between religious organizations and government actors The book will be of interest to researchers across public policy development religion and political science as well as to practitioners at USAID and development organizations

Content Management George Pullman, Gu Baotung, 2017-03-02 This collection of articles is the first attempt by academics and professional writers to delve into the world of content management systems The knowledge economy's greatest asset and primary problem is information management finding it validating it re purposing it keeping it current and keeping it safe In the last few years content management software has become as common as word processing software was five years ago But unlike word processors which are designed for single authorization and local storage content management systems are designed to accommodate large scale information production with many authors providing many different pieces of information kept in a web accessible database any piece of which might find its way into electronic documents that the author doesn't even know exist These software systems are complex to say the least and their impact on the field of writing will be immense

How to Interpret Family History and Ancestry DNA Test Results for Beginners Anne Hart M. a., Anne Hart, 2004 How many DNA testing companies will show you how to interpret DNA test results for family history or direct you to instructional materials after you have had your DNA tested Choose a company based on previous customer satisfaction and whether the company gives you choices of how many markers you want various ethnic and geographic databases and surname projects based on DNA driven genealogy Before you select a company to test your DNA find out how many genetic markers will be tested For the maternal line 400 base pairs of sequences are the minimum For the paternal line men only 37 markers are great but 25 markers also should be useful Some companies offer a 12 marker test for surname genealogy groups at a special price Find out how long the turnaround time is for waiting to receive your results What is the reputation of the company Do they have a contract with a university lab or a private lab Who does the testing and who is the chief geneticist at their laboratory What research articles if any has that scientist written or what research studies on DNA have been performed by the person in charge of the DNA testing at the laboratory Who owns the DNA business that contracts with the lab How involved in genealogy related DNA projects and databases or services is the owner

Who Controls the Internet? Jack Goldsmith, Tim Wu, 2006-03-17 Is the Internet erasing national borders Will the future of the Net be set by Internet engineers rogue programmers the United Nations or powerful countries Who's really in control of what's happening on the Net In this provocative new book Jack Goldsmith and Tim Wu tell the fascinating story of the Internet's challenge to governmental rule in the 1990s and the ensuing battles with governments around the world It's a book about the fate of one idea that the Internet might liberate us forever from government borders and even our physical selves We learn of Google's struggles with the French government and Yahoo's capitulation to the Chinese regime of how the

European Union sets privacy standards on the Net for the entire world and of eBay's struggles with fraud and how it slowly learned to trust the FBI. In a decade of events the original vision is uprooted as governments time and time again assert their power to direct the future of the Internet. The destiny of the Internet over the next decades argue Goldsmith and Wu will reflect the interests of powerful nations and the conflicts within and between them. While acknowledging the many attractions of the earliest visions of the Internet the authors describe the new order and speaking to both its surprising virtues and unavoidable vices. Far from destroying the Internet the experience of the last decade has led to a quiet rediscovery of some of the oldest functions and justifications for territorial government. While territorial governments have unavoidable problems it has proven hard to replace what legitimacy governments have and harder yet to replace the system of rule of law that controls the unchecked evils of anarchy. While the Net will change some of the ways that territorial states govern it will not diminish the oldest and most fundamental roles of government and challenges of governance. Well written and filled with fascinating examples including colorful portraits of many key players in Internet history this is a work that is bound to stir heated debate in the cyberspace community.
