

#### NEW I'LLAM DINK! SETTINGS

The i-Lane is compatible with the Solar Lane and Wireless Solar Lane systems (optional accessories, not included). Solar Lane is a smart system that will automatically adjust the i-Lane controller's watering schedule to automatically keep the desired depth value until the

turning of Solar Lane Sensor or Wireless Solar Lane Sensor.

1. Loosen the Green and Black wires from the Solar Lane sensor or Wireless Solar Lane Receiver to the "OFF" wiring terminals on the i-Lane controller (if Solar Lane Sensor is used, also remove the white terminal).

2. Turn the controller dial to the "Solar Lane Settings" position. The display will initially show default time and that will show the default Region (3) on the left and the default Water Adjustment setting (0) on the right.

3. Modify the Region setting to match local conditions by pressing the  $\blacktriangle$  and  $\blacktriangledown$  buttons:

Region 1 = peak (71" - 37") and peak time 01:00/1

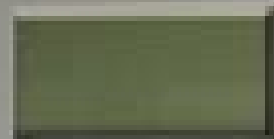

Region 2 = peak (71" - 37") and peak time 01:00/1

Region 3 = peak (71" - 37") and peak time 01:00/1

Region 4 = peak (71" - 37") and peak time 01:00/1

4. Leave the Water Adjustment setting at the default value of 0. Allow Solar Lane to apply watering automatically for a minimum of 1 day. At the end of the 1 day watering period turn the controller dial to the "General Adjustment" position and set the Solar Lane adjustment value. If the value seems too high for that time of the year, turn the dial to the "Solar Lane Settings" position and return to the Water Adjustment value on the right. Increase/decrease the Water Adjustment value and the General Adjust value as needed for the time of the year.

See i-Lane Sensor's manual for more detail on Solar Lane installation and calibration.
