consists in the fact that some minor cognitive restrictions even if not observable at the behavioral level may induce a state of vulnerability that can in some circumstances lead the patients to relapse For instance in alcohol dependence it is well known that despite detoxification cure psychological intervention and medication 50 to 90% of patients resume in alcohol consumption within 1 year post detoxification cure In this view it could be really important to find biological markers for even minor cognitive alterations that can help clinicians to identify which patients are more at risk to relapse in order to improve treatment through best suited medication and specialized programs of cognitive rehabilitation In this topic our aim is to illustrate how and why cognitive event related potentials ERPs may help in different psychopathological populations to adapt the treatment of individual patients on the basis of their specific neuro cognitive alterations *John Deere 520 Tractor Parts Manual* ,1966-02-15 *The Logger and Lumberman Magazine* ,1991 **Books in Print Supplement** ,1984
