## Dual Float Switch

The dual float switch contains two large floating rings enclosed within a protective cage. Water will lift the bottom float by a 1/2", which will activate the pump. If for any reason the lower float does not activate the pump, the water will rise and activate the second switch. As the pump evacuates the water from the pit, the floats will drop. The pump will run for an additional 10 seconds to extend the cycle after the float returns to its original position.

*Note: When mounting the float switch, position the bottom of the cage at the height you want the pump to activate.*

## Installing the Dual Float Switch

The Basement Watchdog dual float switch is easy to install by using the enclosed metal hose clamp.

1. Hold the float switch to the discharge pipe so the cage is below the bracket.
2. Secure the float to the pipe with the enclosed hose clamp, but do not completely tighten the clamp at this time.
3. Position the float switch to a level where the bottom of the float cage is no lower than 3" above the bottom of the pump and no higher than 1" below the top of the pit. To avoid debris pouring into the float, it should be positioned on the side of the discharge pipe opposite the drain tile. *Note: It is important to mount the float below the drain tile that empties into the pit. Mounting it above the drain tile would allow water to fill the drain tile before the pump is activated to pump out the water.*
4. Once the float switch is in the desired position, tighten the clamp.

## Dual Float Controller Model # BWC1

This control box is a piggyback switch that powers the Basement Watchdog Dual Float. The Dual Float Controller will activate the pump when either float is lifted, and then shuts off automatically 10 seconds after the float drops.

## Installing the Dual Float Controller

Plug the control box into a properly grounded, 3-prong receptacle (preferably with ground fault circuit interrupt), then insert the pump plug into the receptacle on the control box.

## Completing the Installation

1. After the initial installation, be sure to check the pump operation by filling the sump with water and observing the pump through one full cycle. When using the dual float the pump should run for an additional 10 seconds after the float drops.
2. Replace the pit cover making sure not to pinch or crimp the pump wire with the cover. The pit cover either has a "hole punch" that will allow the cord to be passed through it, or a hole can be drilled in the cover.
