Numerical Modeling Of Tsunami Waves Juan J Horrillo,William R Knight,Zygmunt Kowalik,2021-10-26 This monograph aims at presenting a unified approach to numerical modeling of tsunami as long waves based on finite difference methods for 1D 2D and 3D generation processes propagation and runup Many practical examples give insight into the relationship between long wave physics and numerical solutions and allow readers to quickly pursue and develop specific topics in greater depth The aim of this book is to start from basics and then continue into applications This approach should serve well the needs of researchers and students of physics physical

oceanography ocean civil engineers computer science and emergency management staff Chapter 2 is particularly valuable as it fully describes the application of finite difference methods to the study of long waves by demonstrating how physical properties of water waves especially phase velocity are connected to the chosen numerical algorithm Basic notions of numerical methods i e approximation of the relevant differential equations stability of the numerical scheme and computational errors are explained through application to long waves Finite difference methods are further developed in major chapters to deal with complex problems that arise in the study of recent tsunamis *Tsunami Science and Engineering II* Valentin Heller, 2019-11-08 Earthquake tsunamis including the 2004 Indian Ocean Tsunami and the 2011 T hoku Tsunami in Japan serve as tragic reminders that such waves pose a major natural hazard Landslide tsunamis including the 1958 Lituya Bay case may exceed 150 m in height and similar waves generated in lakes and reservoirs may overtop dams and cause significant devastation This book includes nine peer review articles from some of the leading experts in the field of tsunami research The collection represents a wide range of topics covering i wave generation ii wave propagation and iii their effects Within i a tsunami source combining an underwater fault rupture and a landslide are addressed in the laboratory Within ii frequency dispersion with the nonlinear shallow water equations is considered and a detailed account of the 1755 Lisbon earthquake tsunami and fire in downtown Lisbon is presented Two articles involve all three phases i to iii including runup and dam over topping Within iii a new semi empirical equation for runup is introduced and the interaction of tsunamis with bridges and pipelines is investigated in large laboratory experiments This state of the art collection of articles is expected to improve modelling and mitigate the destructive effects of tsunamis and inspire many future research activities in this challenging and exciting research field **Communication Plan for Tsunami Warning System; Seventh Edition** National Ocean Survey, 1971
