An earthquake has occurred. Select three statements that are true based on the diagram.

- When energy is released at the focus, seismic waves travel outward from that point in all directions.
- The epicenter is the point on the surface of the Earth above an earthquake.
- The earthquake is a 4.0 on the Richter scale.
- The focus is the point within the Earth where the earthquake was believed to have started.
- This earthquake is on the San Andreas Fault.

Did you remember to read the question carefully and look at key words? This question is asking for three statements that are true.

Eliminate c and e because they are not illustrated in the diagram.

Focus/Epicenter of an Earthquake

Convection is the process by which the Earth's mantle moves. It is a slow-moving current of hot material made of rock. Heat from the core causes the rock in the mantle to warm up and rise toward the Earth's crust. It cools down, becomes denser, and sinks back down when it gets closer to the surface.

17. The convection currents occur in which layer of the Earth?

- Mantle
- Inner core
- Lithosphere
- Outer core

18. Two convection currents that are shown in the diagram are labeled A and B.
