Introduction

A database is a computer program for storing information in an easily retrievable form. It is used mainly to store text and numbers (for example, the Library catalogue, which includes the author, title, class number and accession number for each book).

Most modern databases also allow the storage of other types of information such as dates, hyperlinks, pictures and sounds. As well as being able to store data, a database allows you to select information quickly and easily (for example, a list of the books written by a particular author or those on a certain subject). Finally, it may allow you to produce printed summaries (reports) of the information selected.

When setting up your own database, it is important to plan its use in advance. This is particularly important if you are setting one up which will be used by other people. Among the things which you should consider are:

- What information you will need to store
- What information you want to get out
- Who the data is intended for and how other users will use it
- Whether you want to restrict access to parts of the data to some users only
- Who is allowed to add or change data
- If your data refers to actual people, it may need to be registered under the Data Protection Act (though this doesn't apply to a personal database of family and friends)

Although you can change the specifications of your database as you develop it, you will save yourself a lot of work if as much as possible is planned in advance.

Microsoft Access is a relational database management system (which allows you to link together data stored in more than one table). It is fully supported by IT Services and is available for personal purchase as part of the Ultimate Steel and for departmental installation under the Microsoft Select Agreement.

Starting Microsoft Access

If you are using an IT Services machine, login as usual by entering your *username* and *password*. Then, to start up the program:

1. Open the Windows **Start** button and choose **All Programs**.
2. Select **Microsoft Office** then **Microsoft Access 2010**.

Tip: If you right click on the **Microsoft Access** entry in the menu and choose **Send To then Desktop (create shortcut)** you'll have an icon on the Desktop for future easy access. You can also do this with any Access file.

The Access Screen

On entering Access you are presented with a screen showing available templates, which have been designed to help you create your own databases. You can search for further templates at Office.com. These templates can be quite helpful for particular applications but you nearly always have to tailor the database produced to your own requirements.

You can also either create a new blank database (without help) or open an existing one. In this course you are going to use an existing database, to see how it is set up and how it can be used.
